

## CD4048BM/CD4048BC TRI-STATE® Expandable 8-Function 8-Input Gate

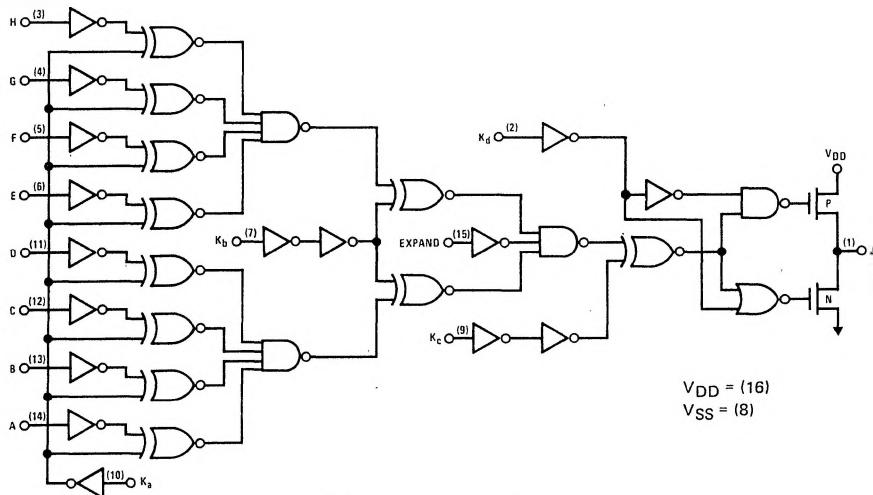

### General Description

The CD4048BM/CD4048BC is a programmable 8-input gate. Three binary control lines  $K_a$ ,  $K_b$ , and  $K_c$  determine the 8 different logic functions of the gate. These functions are OR, NOR, AND, NAND, OR/AND, OR/NAND, AND/OR, and AND/NOR. A fourth input,  $K_d$ , is a TRI-STATE control. When  $K_d$  is high, the output is enabled; when  $K_d$  is low, the output is a high impedance. This feature enables the user to connect the device to a common bus line. The Expand input permits the user to increase the number of gate inputs. For example, two 8-input CD4048's can be cascaded into a 16-input multifunction gate. When the Expand input is not used, it should be connected to  $V_{SS}$ . All inputs are buffered and protected against electrostatic effects.

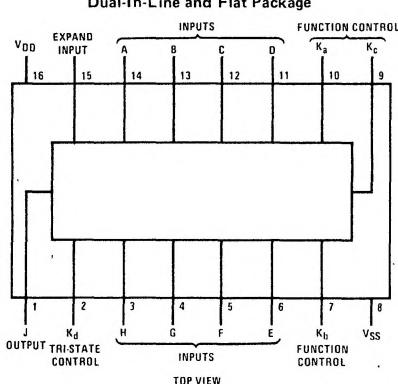

### Features

- Wide supply voltage range                            3.0 V to 15 V
- High noise immunity                                0.45  $V_{DD}$  (typ.)
- High sink and source current capability
- TTL compatibility                                    drives 1 standard TTL load  
at  $V_{CC} = 5$  V,  
over full temperature range
- Many logic functions in one package
