Monolithic Linear IC

SANYO No.2301B

LA5665

Multifunction Multiple Voltage Regulator

Use

- Especially suited for use in micorcomputer-controlled tuners, receivers, preamp and the like

Functions and Features

- Two independent voltage regulators contained in a single chip (15.5V/350mA, 5.6V/100mA)
- Reset circuit which delivers the reset signal on the positive transition, negative transition of the 5.6V output
- Muting circuit which detects the 15.5V output and reset output to deliver the muting signal
  (We have the LA5666 whose detection function for reset, muting is provided on the input voltage side.)
