

## LH0070 Series Precision BCD Buffered Reference LH0071 Series Precision Binary Buffered Reference

### General Description

The LH0070 and LH0071 are precision, three terminal, voltage references consisting of a temperature compensated zener diode driven by a current regulator and a buffer amplifier. The devices provide an accurate reference that is virtually independent of input voltage, load current, temperature and time. The LH0070 has a 10.000V nominal output to provide equal step sizes in BCD applications. The LH0071 has a 10.240V nominal output to provide equal step sizes in binary applications.

The output voltage is established by trimming ultra-stable, low temperature drift, thin film resistors under actual operating circuit conditions. The devices are shortcircuit proof in both the current sourcing and sinking directions.

The LH0070 and LH0071 series combine excellent long term stability, ease of application, and low cost, making

them ideal choices as reference voltages in precision D to A and A to D systems.

### Features

- Accuracy output voltage
 

|        |                     |
|--------|---------------------|
| LH0070 | $10V \pm 0.02\%$    |
| LH0071 | $10.24V \pm 0.02\%$ |
  - Single supply operation
  - Low output impedance
  - Excellent line regulation
  - Low zener noise
  - 3-lead TO-5 (pin compatible with the LM109)
  - Short circuit proof
  - Low standby current
- $11.4V$  to  $40V$   
 $0.2\Omega$   
 $0.1$  mV/V  
 $20$   $\mu$ Vp-p  
 $3$  mA

### Equivalent Schematic

TL/H/5550-1

### Connection Diagram

TL/H/5550-7

Order Number LH0070-0H, LH0071-0H, LH0070-1H,  
LH0071-1H, LH0070-2H or LH0071-2H  
See NS Package Number H03B

### Typical Applications

#### Statistical Voltage Standard

TL/H/5550-8

#### \*Output Voltage Fine Adjustment

TL/H/5550-9

**\*Note:** The output of the LH0070 and LH0071 may be adjusted to a precise voltage by using the above circuit since the supply current of the devices is relatively small and constant with temperature and input voltage. For the circuit shown, supply sensitivities are degraded slightly to 0.01%/V change in  $V_{OUT}$  for changes in  $V_{IN}$  and  $V^-$ .

An additional temperature drift of 0.0001%/°C is added due to the variation of supply current with temperature of the LH0070 and LH0071. Sensitivity to the value of  $R_1$ ,  $R_2$  and  $R_3$  is less than 0.001%/°C.

## Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications. (Note 4)

Supply Voltage 40V  
Power Dissipation (See Curve) 600 mW

Short Circuit Duration Continuous  
Output Current  $\pm 20$  mA  
Operating Temperature Range  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$   
Storage Temperature Range  $-65^{\circ}\text{C}$  to  $\pm 150^{\circ}\text{C}$   
Lead Temp. (Soldering, 10 seconds)  $300^{\circ}\text{C}$

## Electrical Characteristics (Note 1)
