MAX674

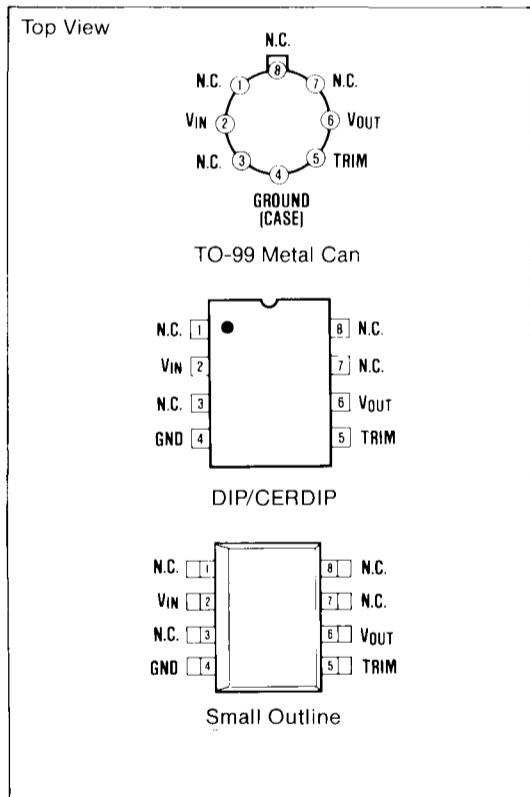

General Description

The MAX674 is a precision voltage reference that is pretrimmed to within $\pm 0.15\%$ of 10V. The reference features excellent temperature stability (as low as 12.0ppm/ $^{\circ}\text{C}$ guaranteed), low current drain and low noise. It is supplied in the space-saving narrow Small Outline package, as well as, the standard 8-pin TO-99 Metal Can, Plastic DIP and CERDIP packages.

Applications

A/D Converters
D/A Converters
Digital Voltmeters
Voltage Regulators
Threshold Detectors

Pin Configuration

Features

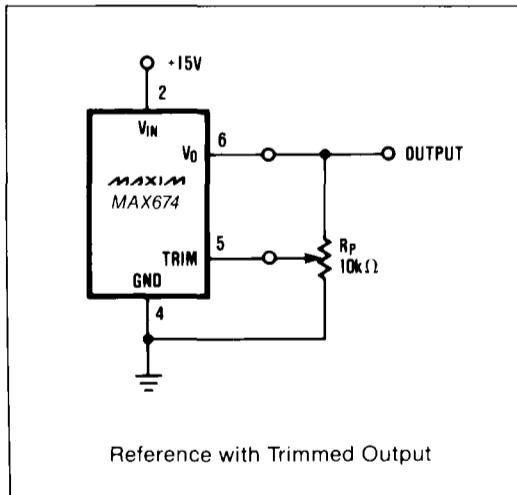

- ◆ Pretrimmed to +10V, $\pm 0.15\%$
- ◆ Excellent Temperature Stability: 12ppm/ $^{\circ}\text{C}$
- ◆ Low Noise: 20 $\mu\text{V}_{\text{p-p}}$
- ◆ Low Supply Current: 1.4mA Max
- ◆ Short-Circuit Proof
- ◆ Load Regulation 0.001%/mA
- ◆ Pin-For-Pin Compatible with REF01

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect the device reliability.

Output Adjustment

The MAX674 trim terminal can be used to adjust the output voltage over a $10V \pm 300mV$ range. This feature allows system errors to be trimmed by setting the reference to a voltage other than 10V such as 10.240V for binary applications (see "Typical Operating Circuit"

on first page). The trim terminal may, of course, be left open if no adjustment is needed.

Adjustment of the output does not significantly affect the temperature performance of the device. The temperature coefficient change is approximately $0.7ppm/^{\circ}C$ for 100mV of output adjustment from its initial value.
