

TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

TA1241AN

DEFLECTION PROCESSOR IC FOR TVs

Ideal for large-inch CRT, the TA1241AN is an IC for deflection correction and vertical / horizontal picture size adjustment, with a 24-pin plastic package.

The TA1241AN can control all kinds of picture adjustment functions through I²C-bus communications.

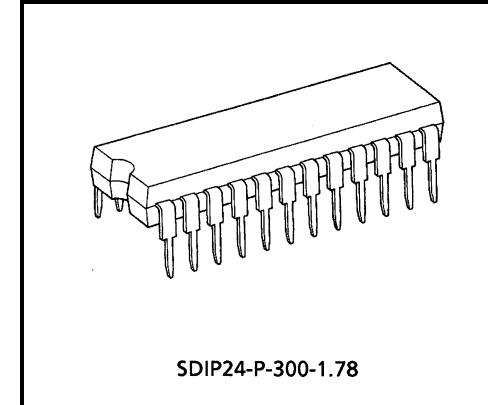

FEATURES

BUS write mode

- Vertical amplitude adjustment
- Vertical position adjustment
- Vertical linearity correction
- Vertical S correction
- Vertical J correction
- Vertical EHT correction
- Trapezium correction
- Horizontal amplitude correction
- Horizontal EHT correction
- Parabola correction
- Corner correction
- Center curve correction (SAW, PAR)

BUS read mode

- V-guard detection
- LVP detection
- V output detection
- E / W output detection

Weight: 1.22 g (Typ.)

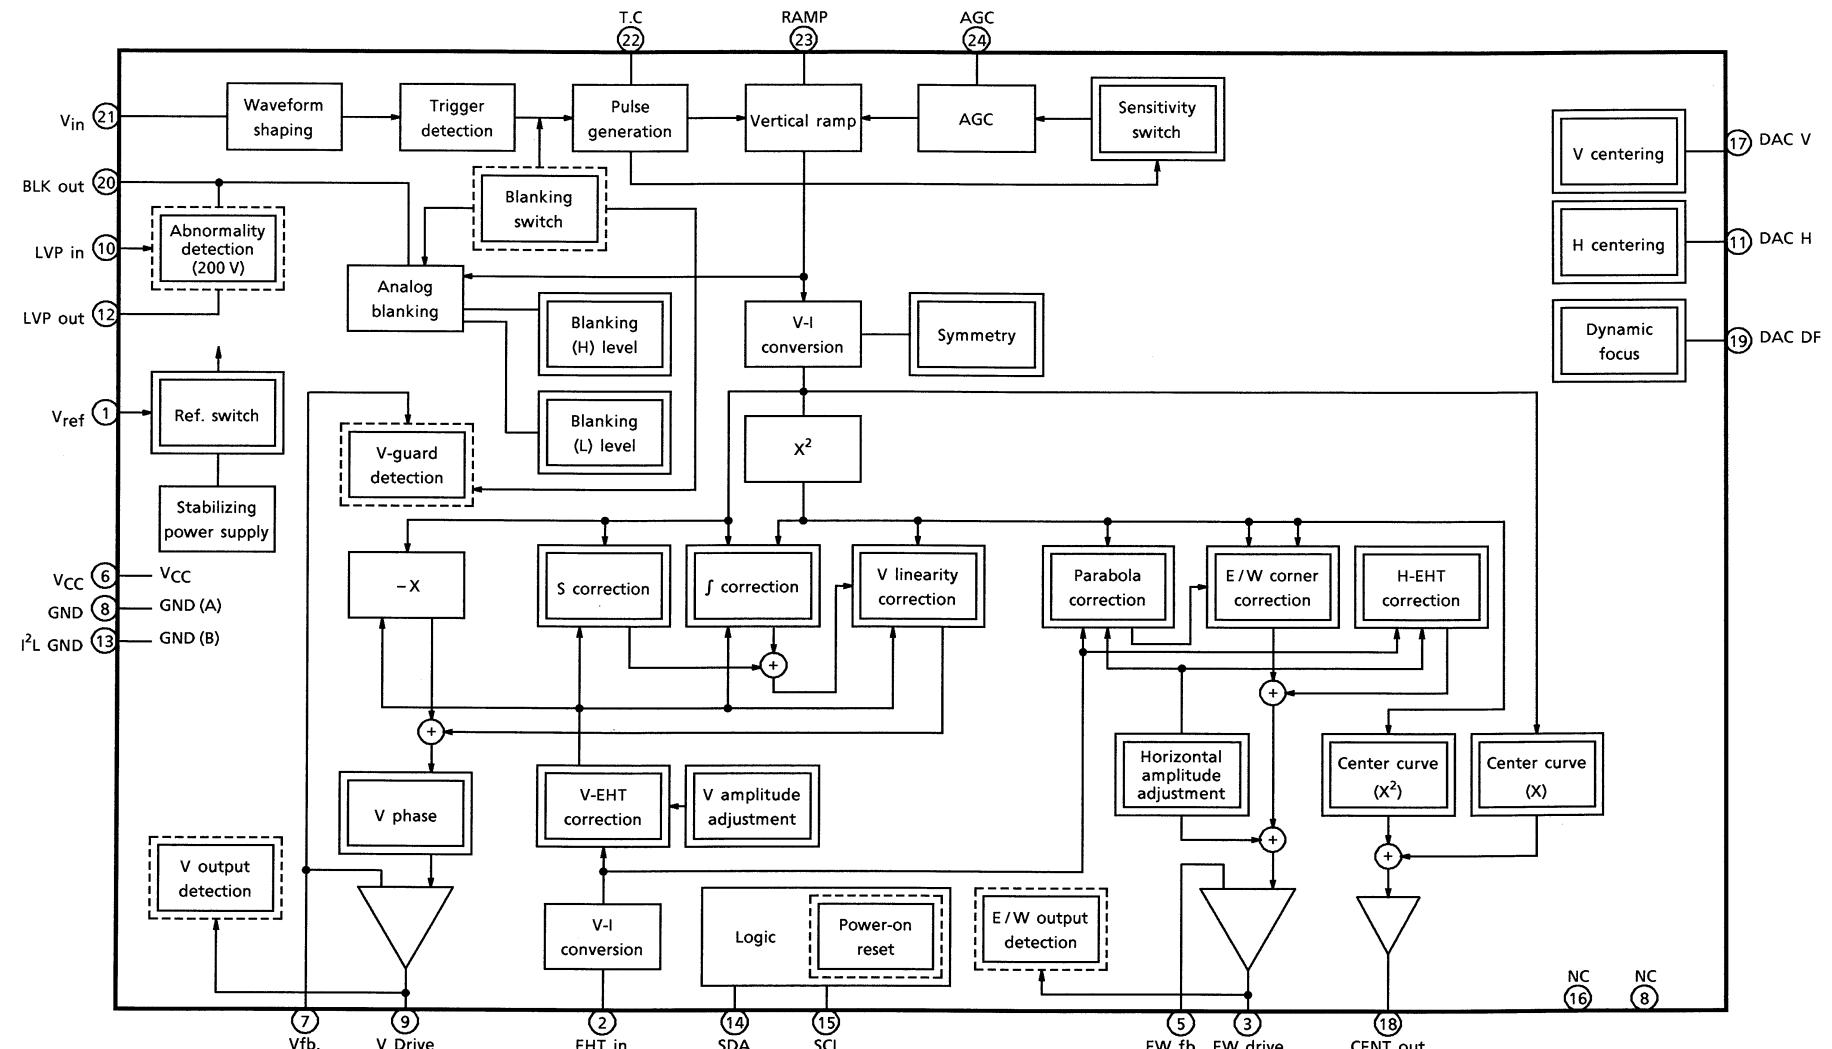

Pin output

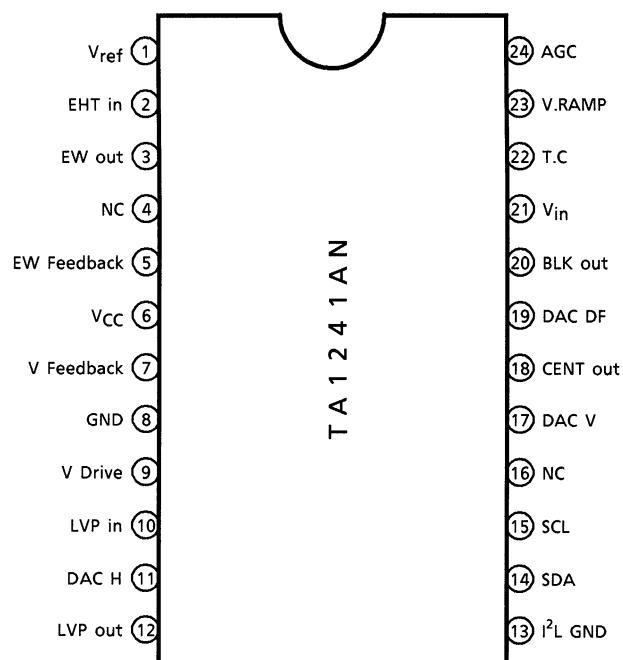

- V centering (DAC)
- H centering (DAC)
- Dynamic focus (DAC)
- Analog blanking
- LVP detection

000707EBA1

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
- In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

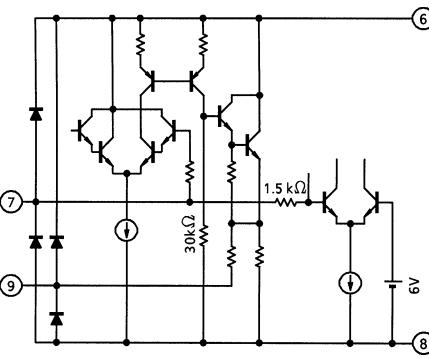

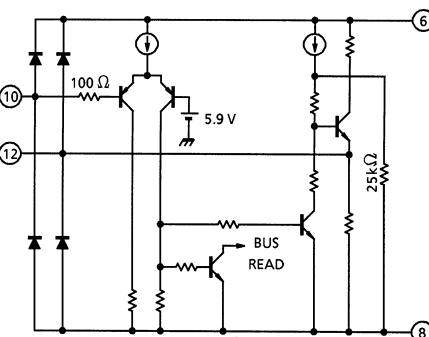

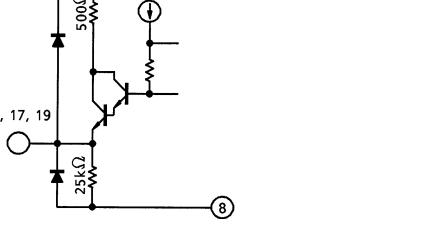

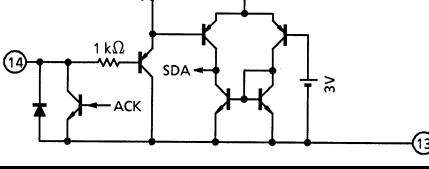

BLOCK DIAGRAM

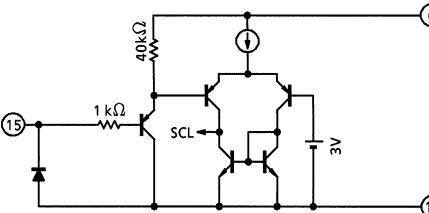

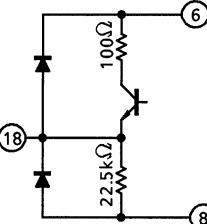

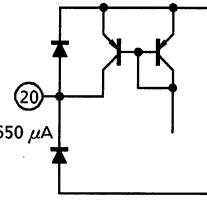

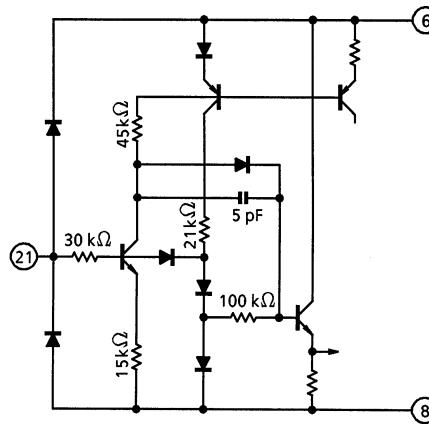

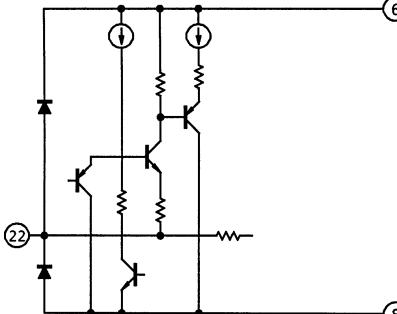

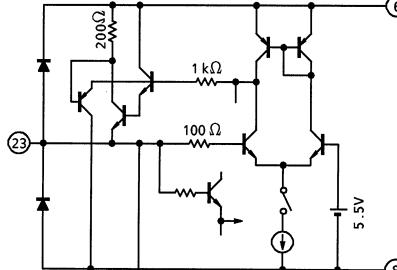

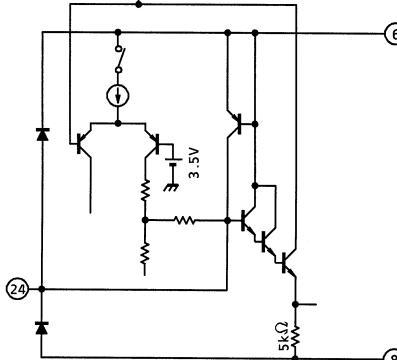

PIN CONNECTION

PIN FUNCTION

PIN No.	PIN NAME	FUNCTION	INTERFACE	INPUT / OUTPUT SIGNAL
1	V _{ref}	Bias voltage external input pin for the V and E / W blocks. BUS write mode controls the switching.		—
2	EHT in	EHT input pin.		—
3	EW Drive	E / W drive output pin. Also performs E / W detection in BUS read mode.		—
5	EW Feedback	E / W feedback pin.		
4	NC	—	—	—
6	V _{cc}	V _{cc} pin. Connect 9 V (Typ.).	—	—

PIN No.	PIN NAME	FUNCTION	INTERFACE	INPUT / OUTPUT SIGNAL
7	V Feedback	Vertical negative feedback input pin. When voltage on this pin equals or exceeds 6 V, the device outputs a blanking signal to pin 20 and sends discriminating data to BUS read.		—
9	V Drive	Vertical signal output pin. Also performs vertical output detection in BUS read mode.		2.75 V 0 V
8	GND	GND pin.	—	—
10	LVP in	Used to connect reference voltage to protect the deflection block from a low-voltage.		—
12	LVP out	Outputs abnormal power supply detection result. Also performs LVP detection in BUS read mode.		OK : DC0.7V NG : DC5.0V
11	DAC H	DAC output pin for horizontal centering.		—
17	DAC V	DAC output pin for vertical centering.		—
19	DAC DF	DAC output pin for dynamic focus.		—
13	I ² L GND	GND pin for the I ² L block.	—	—
14	SDA	SDA pin for the I ² C BUS.		—

PIN No.	PIN NAME	FUNCTION	INTERFACE	INPUT / OUTPUT SIGNAL
15	SCL	SCL pin for the I ² C BUS.		—
16	NC	—	—	—
18	CENT out	Outputs center curve correction waveform.		—
20	BLK out	Analog blanking output pin. Open collector output. In BUS write mode, outputs a vertical blanking signal for the vertical RAMP.		
21	V in	Inputs trigger pulse. Detects the falling edge of the input pulse and generates a trigger pulse to the next-stage circuit.		

PIN No.	PIN NAME	FUNCTION	INTERFACE	INPUT / OUTPUT SIGNAL
22	T.C	This pin connects a pulse-shaping filter.		—
23	V RAMP	Used to connect a capacitor to generate a vertical RAMP signal.		5.5 V 3.5 V
24	AGC	Used to connect a filter to automatically adjust the vertical RAMP oscillation amplitude.		—

DEFLECTION CORRECTION TABLE

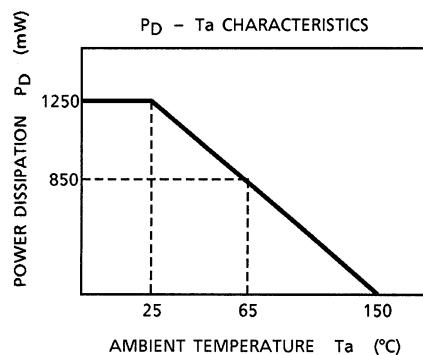

FUNCTION	OUTPUT WAVEFORM	PICTURE CHANGE	VARIABLE RANGE
Vertical Amplitude Adjustment [PICTURE HEIGHT]		Typ. (Solid line at left) → Large value (Dotted line at left)	-48~+48%
Vertical Linearity Correction [V-LINEARITY]		Typ. (Solid line at left) → Large value (Lower stretching, upper compression)	-13~+13%
Vertical S Correction [V-S CORRECTION]		Typ. (Solid line at left) → Large value (Upper and lower compression)	-24~+24%
Vertical \int Correction [V- \int CORRECTION]		Typ. (Solid line at left) → Large value (Upper and lower compression)	0~4%
Vertical EHT Correction [V-COMPENSATION]		Typ. (Solid line at left) → Large value (Dotted line at left)	0~9%
Vertical Phase Correction [V-SHIFT]		Typ. (Solid line at left) → Large value (Dotted line at left)	-800~+800 mV

FUNCTION	OUTPUT WAVEFORM	PICTURE CHANGE	VARIABLE RANGE
Parabola Amplitude Adjustment [E-W PARABOLA]		Typ. Small value  (Solid line at left) (Dotted line at left)	0~5.6 V
Corner Correction [E-W CORNER]		Typ. Large value  (Solid line at left) (Dotted line at left)	-3.2~+3.2 V
Horizontal EHT Correction [H-COMPENSATION]		Typ. Large value  (Solid line at left) (Dotted line at left)	0~+9%
Horizontal Amplitude Adjustment [PICTURE WIDTH]		Typ. Large value  (Solid line at left) (Dotted line at left)	1.6~7.3 V
Parabola Symmetry Correction [TRAPEZIUM]		Typ. Small value  (Solid line at left) (Dotted line at left)	-9~+9%
Center Curve SAW Correction [CENT SAW]		Typ. Large value  (Solid line at left) (Dotted line at left)	-2~+2 V
Center Curve Parabola Correction [CENT PAR]		Typ. Large value  (Solid line at left) (Dotted line at left)	-1~+1 V

MAXIMUM RATINGS (Ta = 25°C)

CHARACTERISTICS	SIGNAL	RATING	UNIT
Power Supply Voltage	V _{CC}	12	V
Power Dissipation	P _D MAX	1250 (Note)	mW
Input Signal Voltage	e _{in}	9	V _{p-p}
Operating Temperature	T _{opr}	-20 to 65	°C
Storage Temperature	T _{stg}	-55 to 150	°C

Note: When using at temperatures higher than 25°C, decrease maximum power dissipation by 10 mW for every 1°C over 25°C.
