

TENTATIVE TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

TA1298AN**PAL / NTSC VIDEO CHROMA AND DEFLECTION IC FOR CTV
(NORMAL SCAN / DOUBLE SCAN MODE)**

TA1298AN provides Video, Chroma and Deflection (Sync, when double scan mode) circuit for a PAL/NTSC Color TV, and suitable for a high picture quality, large screen size, wide and/or double scanning TV. These functions are integrated in a 56 pin dual-in-line shrink-type plastic package.

TA1298AN provides a high-performance video processor in which a YUV double scanning signal can be applied in Video, PAL / NTSC auto-detection circuit in Chroma and 50 / 60 Hz auto-detection circuit in Sync. PAL demodulation circuit includes Baseband signal processing system. And this demodulation circuit does not required any adjustment.

TA1298AN includes I²C bus interface, so you can adjust various functions and controls via the bus.

SDIP56-P-600-1.78
Weight : 5.55 g (Typ.)

FEATURES

Video / Chroma section

- Y delay line
- Chroma trap
- IQ demodulation for NTSC, UV demodulation for PAL
- Color decoder TINT

BEP (Back End Processor) section

- Enable to process a YUV signal independently
- Double scanning signal processing capability

(Y processing section)

- Black Stretcher (Controlled by I²C bus)
- DC Restoration Circuit (Controlled by I²C bus)
- Highbright-color Circuit
- D.L. Aperture Sharpness Circuit + Super Real Transcend Circuit (LTI)
- γ Correction (Enable to control Binary line, Gain / Start point)
- Y noise reduction circuit
- Velocity Scan Modulation output (The first order differential output and phase / amplitude adjustment)

(Color difference section)

- Color Detail Enhancer
- Selectable relative phase and amplitude
- Flesh-color restoration (only IQ demodulation)
- Color γ circuit
- Baseband tint color

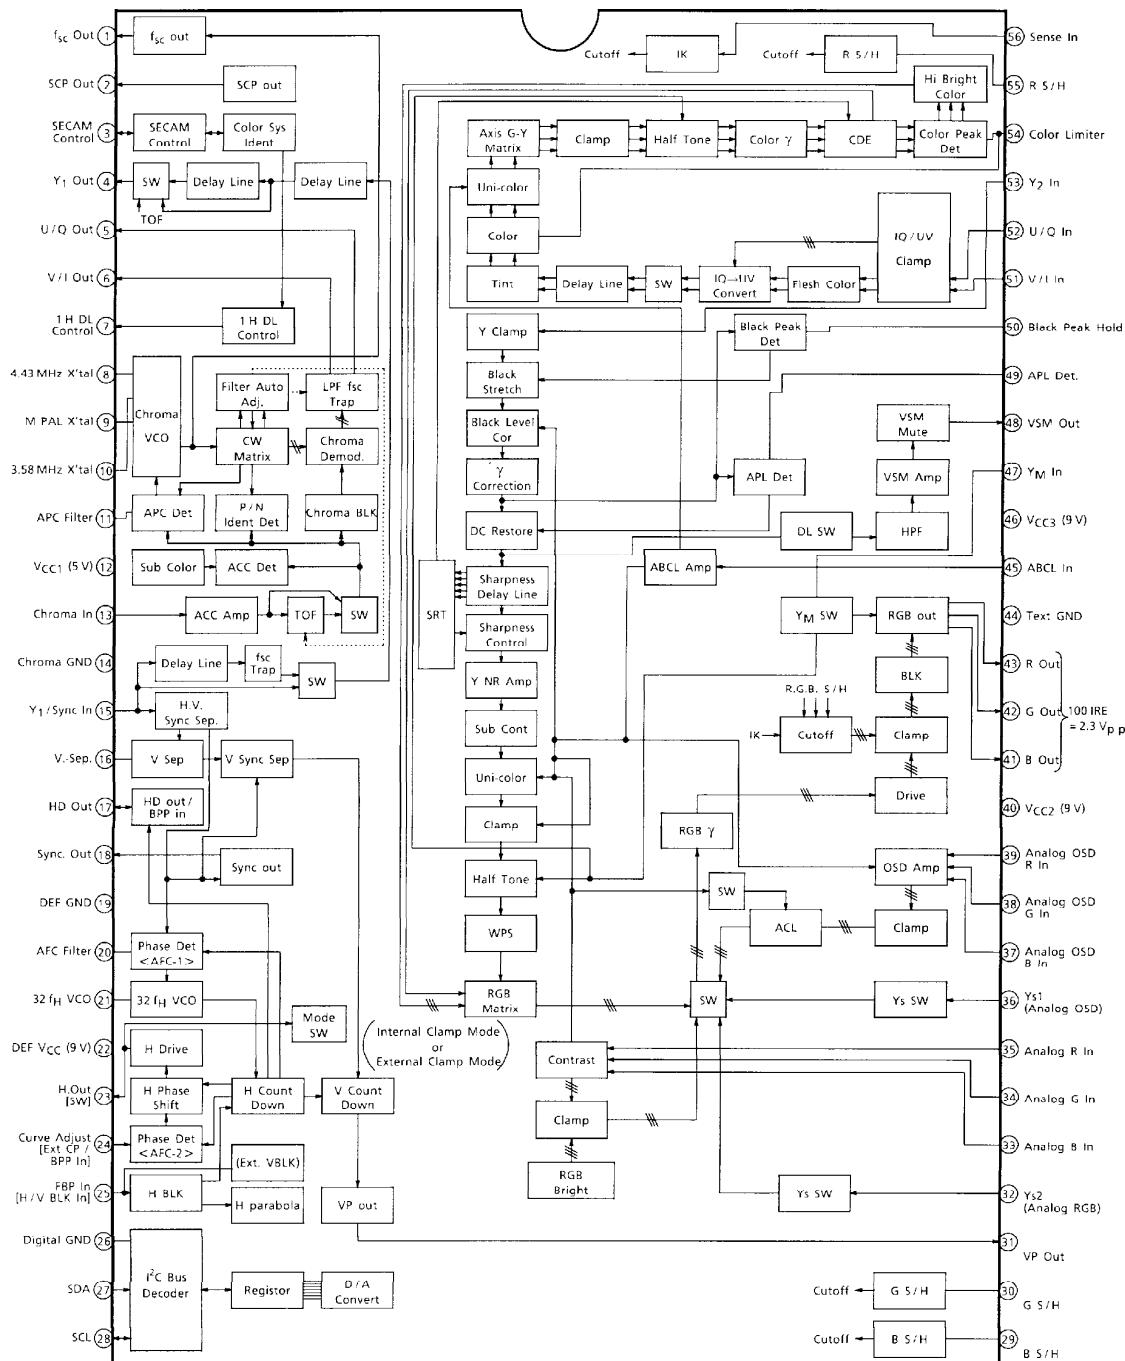

(Text section)

- RGB primary color output
- On Screen Display interface
- Linear RGB interface
- Fast Blanking
- Drive control
- AKB (only black level) or Cut-off Bus control

Deflection section

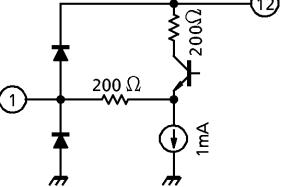

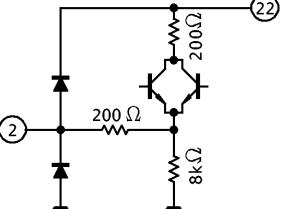

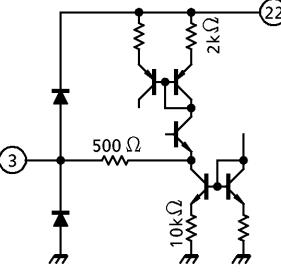

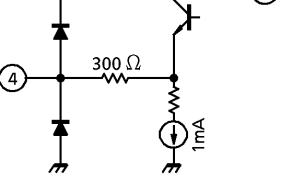

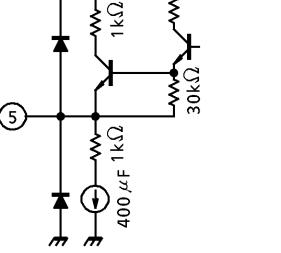

- High Performance Sync. Separation Circuit
- Adjustment free H and V oscillation circuit by Countdown system
- Horizontal and Vertical position adjustment
- Sync separation, HD output
- Horizontal and Vertical pulse output in normal mode

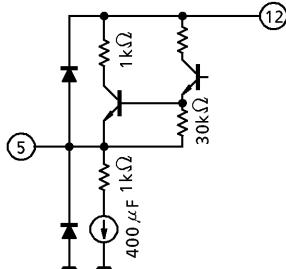

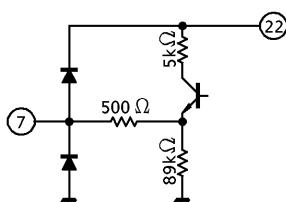

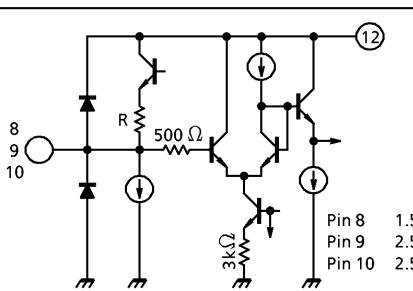

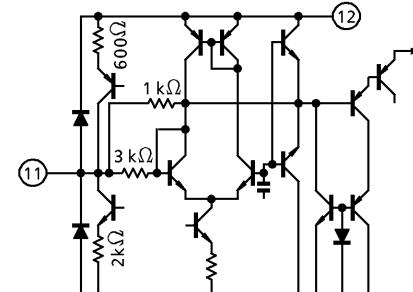

BLOCK DIAGRAM

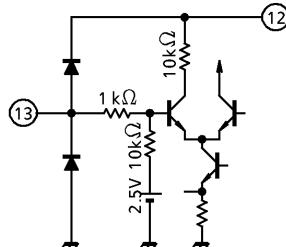

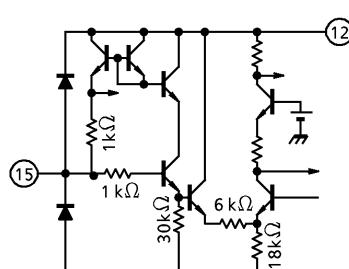

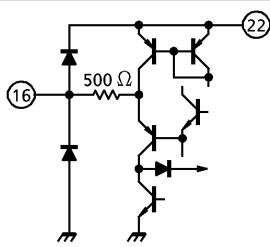

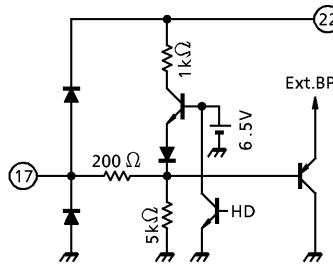

- Pin 23 connect to V_{CC} : Double Scan mode
- (Note) [] : for Double Scan mode only (External clamping pulse input mode)

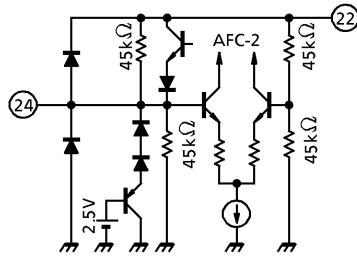

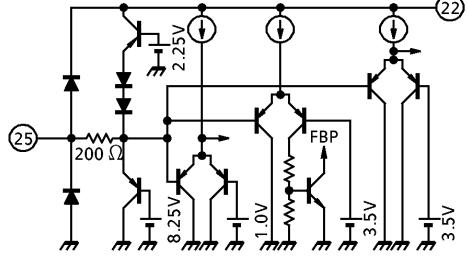

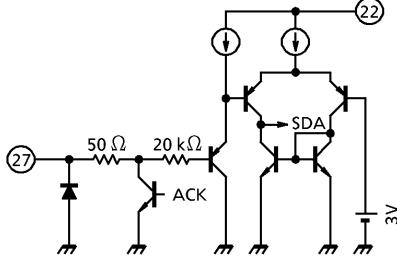

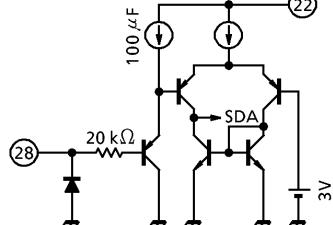

TERMINAL FUNCTIONS

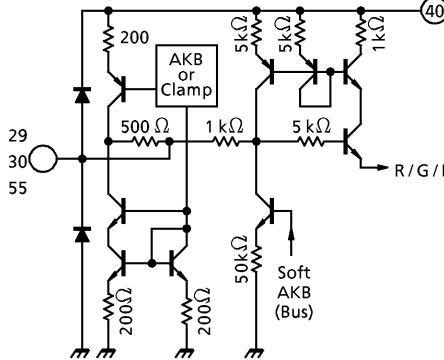

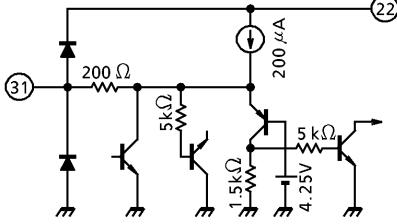

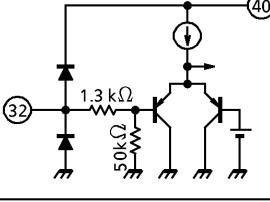

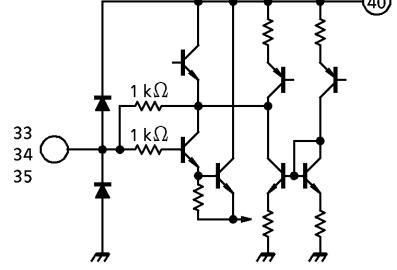

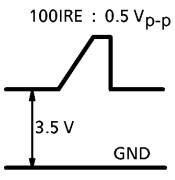

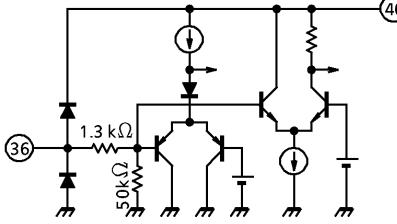

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
1	f_{sc} output	Outputs oscillation waveform of VCXO. When 3.58NTSC killer-off this pin voltage sets 3.2 V. When B/W or other systems killer-off, this pin voltage sets 1.4 V.		DC 3.58NTSC : 3.2 V B/W or Others system : 1.4 V AC 0.6 V _{p-p}
2	SCP output	Outputs SCP (Sand Castle Pulse). The output signal consists of clamp pulse, horizontal blanking pulse, and vertical blanking. The minimum load resistance is 3 kΩ.		8.3 V 4.8 V 2.5 V GND
3	SECAM control	The input/output pin that is used to control the SECAM demodulation IC. When current stronger than 250 μA flows from this pin, that is recognized as SECAM.		When PAL/NTSC 4.0 V When SECAM 0.75 V
4	Y1 output	Outputs the Y signal that routed the f_{sc} TRAP (TRAP can be turned on or off with Bus.) and the Y delay line circuit.		1 V _{p-p} 2 V GND
5	U/Q output	Outputs B-Y (U) or I signal. It includes LPF that can remove carrier.		DC 2.5 V Rainbow color bar : 360 mV _{p-p}

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
6	V/I output	Outputs R-Y (V) or Q signal. It includes LPF that can remove carrier. The chroma signal that routed ACC and TOF circuits (before demo input) can be monitored by pulling up this pin at 10 kΩ.		DC 2.5 V Rainbow color bar : 360 mV _{p-p}
7	1H DL control	Outputs the result of whether the signal is PAL, SECAM or NTSC. Connect the output to the 1 H DL IC. In the case of discrimination between white or black, the voltage just before that is retained. The voltage immediately after turning-on is not fixed.		8.4 V : PAL 4.3 V : SECAM 0 V : NTSC
8	4.43 MHz X'tal	Connect X'tal. In the case of series capacity, the oscillation frequency (f_0) can be changed. In the case of parallel capacity, the changeable range of frequency can be changed.		DC 4.0 V 90 mV _{p-p}
9	M PAL X'tal			
10	3.58 MHz X'tal			
11	APC filter	Connect APC filter demodulating the chroma. The oscillation frequency of VCXO varies depending on the voltage at this pin.		DC
12	VCC1 (5 V)	The V_{CC} of the chroma and I ² C Bus blocks. Connect 5 V (Typ.)	—	—

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
13	Chroma input	The pin through which the chroma is input. Input the chroma signal that was subjected to Y/C separation.		Burst level : 300 mVp-p 2.5 V GND
14	Chroma GND	The GND pin of the chroma processing block.	—	—
15	Y1/SYNC input	The pin through which the composite video signal or Y signal is input. Input via clamp capacitor.		1 Vp-p 2.5 V GND
16	V-Sep.	Connect the filter separating the vertical synchronization.		DC 6.4 V
17	HD output	(1) When BUS HD-OUT = 0 Output the HD pulse (pulse duration : 1 μs) together with AFC. This pin also serves as the external input pin that accepts BPP (black peak detection stopping pulse) signal. (2) When BUS HD-OUT = 1 When AKB mode is ON, the pulse which covers AKB reference period is output.		(1) HD 5 V Ext.BPP 0 V BPP TH : 1.0 V (2) 5 V 0 V

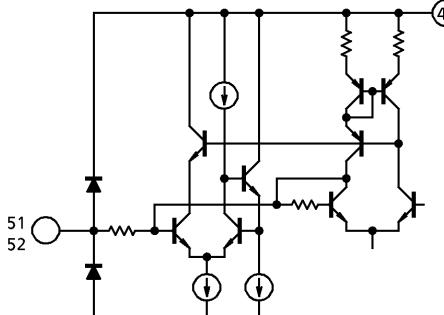

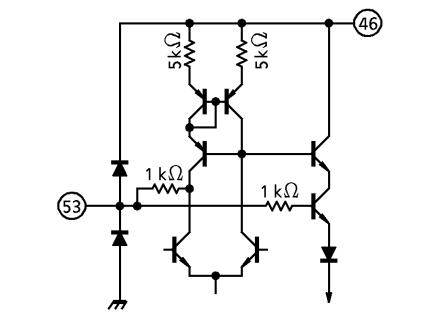

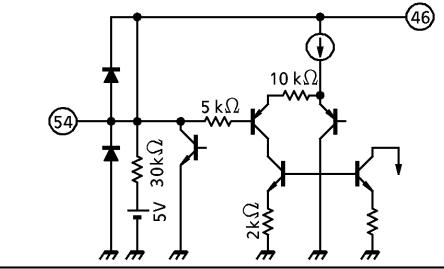

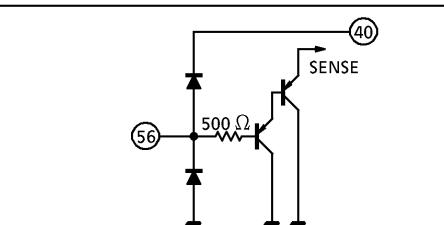

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
18	SYNC. output	Output the synchronizing signal that was separated in the synchronous separation circuit. This pin is of the open collector system. Connect the pull-up resistor.		
19	DEF GND	The GND pin of DEF block.	—	—
20	AFC filter	Connect the filter for horizontal AFC. The frequency of the horizontal output varies depending on the voltage at this pin.		DC
21	32 fH VCO	Connect the ceramic oscillator for horizontal oscillation. The oscillator to be used is CSBLA503KECF30, made by Murata electronics.		
22	DEF V _{CC} (9 V)	The V _{CC} of DEF block. Connect 9 V (Typ.) to this pin.	—	—
23	Horizontal output (Mode SW)	Produces the horizontal output. Connecting the DEF V _{CC} to this pin can switch Double Scan mode. In this case, the horizontal output is not produced.		HIGH : 3.2 V LOW : 0.2 V

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
24	Curve correction (Ext. CP / BPP input)	(1) Used to correct distortion of picture in the case of high-tension fluctuation. Input the AC component of high-tension fluctuation. To deactivate the distortion correction feature, connect a capacitor of $0.01 \mu\text{F}$ between this pin and GND. (2) Double scan mode This pin is to input external CP (Clamping Pulse) and BPP (Black Peak detection stopping Pulse).		(1)DC 4.5 V (2) Ext. Clamp Pulse Ext. CP TH : 3.6 V Ext. BPP Ext. BPP TH : 1.0 V
25	FBP input	The pin through which FBP is input to generate pulses for horizontal AFC2, Y smoothing, and horizontal blanking. When doble SCAM mode, input H blanking pulse (5 V or over).		9 V 3.5 V (AFC-2) 1.0 V (H BLK)
26	Digital GND	The GND pin of I ² L block.	—	—
27	SDA	The SDA pin of I ² C bus.		—
28	SCL	The SCL pin of I ² C bus.		—

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
29 30	B S/H G S/H	These pins are to be connected with a capacitor for sampling and holding a bias voltage in the AKB operation, or for clamping to set DC voltage of RGB outputs in the no-AKB mode.		DC
31	VP output	Outputs the vertical pulse. This pin also serves as the external blanking input. When current stronger than $350 \mu\text{A}$ flows, blanking takes place due to the internal blanking and OR logic circuit.		
32	YS2	Switches between the internal RGB signal and analog RGB (pin 33, 34, 35) signal. When this switch is on, the VSM output is muted.		A. BGB 0.75 V TV GND
33 34 35	Analog B input Analog G input Analog R input	The pin through which the analog RGB is input. Input the RGB signal via clamp capacitor.		100IRE : 0.5 V _{p-p} 
36	YS1	Switches between the internal RGB signal and OSD /analog RGB (pin 37, 38, 39). When this switch is on, the VSM output is muted.		OSD 2.25 V VSM Mute 0.75 V TV GND

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
37	Analog OSD B input	The pin through which the OSD signal or analog RGB is input. (1) When inputting an OSD signal, input the ODS signal with a voltage of 0~5 V (4.1 V or more). (2) When inputting an analog RGB, input the RGB signal via clamp capacitor. ACL works on this input signal only when the entire screen is YS1-HI (the entire screen : OSD).		(1) (2)
40	VCC2 (9 V)	The VCC pin of the text block. Connect 9 V (Typ.).	—	—
41	B output			
42	G output	Outputs RGB.		
43	R output			
44	TEXT GND	The GND pin of TEXT block.	—	—
45	ABCL input	Used to control the external uni-color, brightness, and dynamic ABL. Use this pin when using ABL or ACL. The sensitivity and starting point of the ABL and dynamic ABL can be set by using bus.		ABCL OFF : 6 V or more

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
46	VCC3 (9 V)	The V_{CC} pin of picture quality and color difference blocks. Connect 9 V (Typ.).	—	—
47	YM input	The half-tone switch for internal RGB signal. When the voltage at this pin is set to 7.0 V or more, the RGB output voltage.		Soft AKB 7.0 V Half Tone 0.75 V TV GND
48	VSM output	Outputs the Y-signal that routed HPF after it had been subjected to DC restoration. The output is muted with the switches of pins 32 and 36.		DC 3.5 V
49	APL detection	Connect the filter correcting DC restoration ratio. Opening this pin can monitor the Y-signal that was subjected to black stretching.		DC
50	Black peak hold	Connect the filter controlling the black stretching gain of the black stretching circuit. The black stretching gain varies depending on the voltage at this pin.		DC

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT	INPUT / OUTPUT SIGNAL
51	V/I input	The pin through which R-Y (V) / I and B-Y (U) / Q signals are input. Input via clamp capacitor.		When Burst : Chroma = 1 : 1 360 mV _{p-p} DC : 5.0 V
52	U/Q input			
53	Y2 input	The pin through which B-Y (V) / I and R-Y (U) / Q signals are input. Input via clamp capacitor.		1 V _{p-p} (同期含) 6.3 V GND
54	Color limiter	Color the filter detecting the color limit.		DC
55	R S/H	The same as pin 29 and 30.	The same as pin 29 and 30.	DC
56	SENSE input	This pin is to sense IK voltage feed-back from a CRT Drive circuit.

(Note) There is noise on the internal line to control UNI-COLOR, while reading I²C bus data. This generated noise changes RGB output amplitude, which should be recognized as horizontal line noise. TOSHIBA recommends to read bus data while a vertical blanking period, otherwise, Please evaluate about this. Writing data in any case do not cause this noise.

I²C BUS TRANSMISSION / RECEIVING

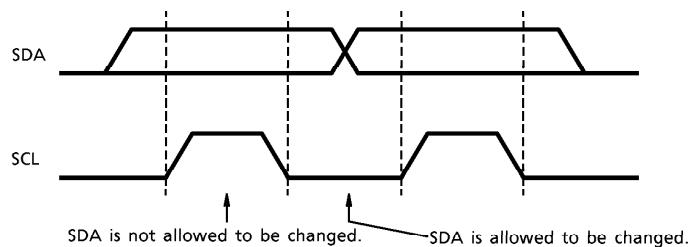

SLAVE ADDRESS : 88 H

A ₆	A ₅	A ₄	A ₃	A ₂	A ₁	A ₀	W/R
1	0	0	0	1	0	0	0/1

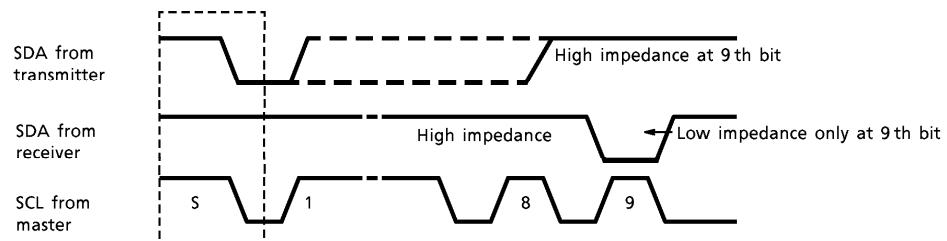

Start / stop condition

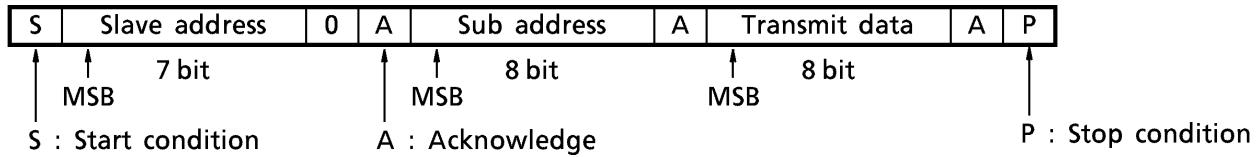

Bit transmission

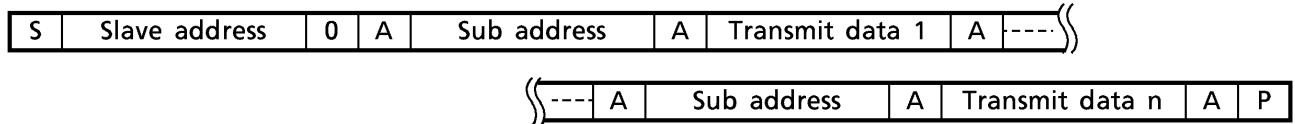

Confirmation response

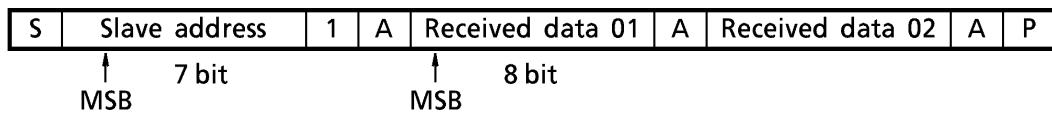

DATA TRANSMIT FORMAT 1

DATA TRANSMIT FORMAT 2

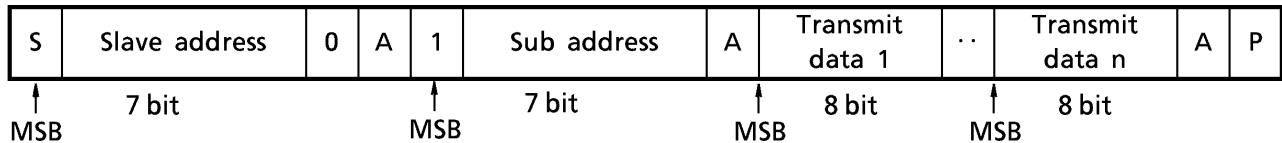

DATA RECEIVE FORMAT

At the moment of the first acknowledge, the master transmitter becomes a master receiver and the slave receiver becomes a slave transmitter. This acknowledge is still generated by the slave.

The STOP condition is generated by the master.

OPTIONAL DATA TRANSMIT FORMAT : AUTOMATIC INCREMENT MODE

In this transmission method, data is set on automatically incremented sub-address from the specified sub-address.

Purchase of TOSHIBA I²C components conveys a license under the Phillips I²C Patent Rights to use these components in an I²C system, provided that the system conforms to the I²C standard Specification as defined by Phillips.

○ Pin 23 H-out (Mode SW)

You can select the Double Scan Mode (External CP (Clamping Pulse) input Mode), by connecting Pin 23 to DEF V_{CC} . (The threshold of Pin 23 : 8.7 V = DEF V_{CC} - 0.3 V)

When Double Scan Mode, function of Pin 24 and 25 are changed.

● Normal Scan (Internal CP) Mode : Pin 23 — H-out

The function of Pin 24 is curve correction input, that of Pin 25 is FBP (Flay Back Pulse) input.

The input signals of Y2, U/I and V/I inputs (Pin 53, 52 and 51), Analog OSD inputs (Pin 39, 38 and 37), Analog RGB inputs (Pin 35, 34 and 33) are clamped of the internal CP based on the Y1 / Sync input (Pin 15).

● Double Scan (External CP input) Mode : Pin 23 — H-out

The function of Pin 24 is EXT / BPP (Note) input, that of Pin 25 is H/V BLK (blanking) input.

The input signals of Y2, U/I and V/I inputs (Pin 53, 52 and 51), Analog OSD inputs (Pin 39, 38 and 37), Analog RGB inputs (Pin 35, 34 and 33) are clamped of the external CP based on Pin 24.

In case of Double Scan Mode, bus "V-BLK" should be set (1) ; OFF.

TERMINAL FUNCTIONS

PIN No. DIAGONAL	MODE NORMAL SCAN MODE (INTERNAL CP)	DOUBLE SCAN MODE (EXTERNAL CP INPUT)
Pin 23	H-out	DEF V_{CC} (9 V)
Pin 24	Curve correction signal input	EXT CP/BPP input
Pin 25	FBP input (for AFC-2 detection, H BKL)	H/V BLK input (for RGB H/V BLK, AKB)
Pin 53, 52, 51	Clamping by internal CP (based on Pin 15)	Clamping by external CP (based on Pin 24)
Pin 39, 38, 37		
Pin 35, 34, 33		
Pin 15	Normal scan ; Y/Sync signal input	
Pin 17	Normal scan ; HD pulse output (based on Pin 15)	
Pin 31	Normal scan ; VP output (based on Pin 15)	

(Note) BPP : Black Peak detection stopping Pulse

MAXIMUM RATINGS ($T_a = 25^\circ C$)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Supply Voltage	V_{CCmax}	12	V
Input Terminal Voltage	e_{inmax}	9	V_{p-p}
Power Dissipation	P_D (Note 1)	1920	mW
Power Dissipation Reduction Rate	$1/Q_{ja}$	15.4	$mW/^\circ C$
Operating Temperature	T_{opr}	-20~65	$^\circ C$
Storage Temperature	T_{stg}	-55~150	$^\circ C$

(Note 1) Refer to the figure below.

(Note 2) This IC have a horizontal line noise caused by reading BUS data.

TOSHIBA recommends to read bus data while a vertical blanking period, otherwise enough evaluation about this and careful programming of the micro controller are necessary to be done.

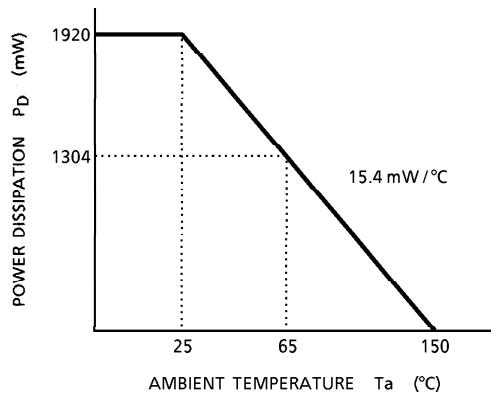

Fig. Power dissipation reduction against higher temperature

RECOMMENDED CONDITION IN USE

TEST CONDITIONS

(1) Set the subaddress (17) data to (07).
(2) Measure the picture period voltage of pin 43 when the cutoff (subaddress 0C) data are changed to maximum (FF), center (80), and minimum (00), and calculate the amount of change of maximum and minimum from the center. (CUT+, CUT-).

(3) In steps (1) and (2) above, make the following changes and remeasure :

Change the subaddress (0D) data and measure pin 42. Change the subaddress (0E) data and measure pin 41.

(1) Input signal 1 ($f_0 = 100\text{ kHz}$, picture period amplitude = 0.2 V_{p-p}) to pin 53.
(2) Measure the picture period amplitude of pin 42 when the drive (subaddress-09) data are changed to maximum (FE), center (80), and minimum (00).
(3) Calculate the maximum and minimum amplitude ratios for the drive center using decibel conversion. (DRG+, DRG-)
(4) In steps (1) to (3) above, change the subaddress (0A) data, measure pin 41, and repeat the calculations. (DRB+, DRB-)
(5) In steps (1) to (3) above, set data of the LSB of subaddress (09) to 1, measure pin 43, and repeat the calculations. (DRR+, DRR-)

(1) Set the subaddress (00) data to (FF).
(2) Measure the picture period voltages of pins 43, 42, and 41. (MURD, MUGD, MUBD)

(1) Set the subaddress (10) data to (08).
(2) Measure the picture period voltages of pins 43 and 42 and the picture period amplitude of pin 41. (BBR, BBG, BBB)

 SW23 : ON, SW24 : ON, SW25 : ON

(1) Change the G and B drive data to the value resulting from the adjustment in step (1) of T20.
 (2) Set the brightness to maximum, set the subaddress (0F) data to (30), and set the subaddress (10) data to (20).
 (3) Input signal 3 ($f_0 = 100\text{ kHz}$, picture period amplitude $= 0.23\text{ V}_{p-p}$) to pin 51.
 (4) Measure the picture period amplitude of pin 43 when the unicolor data change to the maximum (7 F), the center (40), and the minimum (00). (ΔvCY , $vCYMAX$, $vCYCNT$, $vCYMIN$)
 (5) Calculate the unicolor maximum and minimum amplitude ratios using decibel conversion. (ΔvCY)
 (6) Repeat steps (3), (4), and (5) above, inputting the picture period amplitude 0.2 V_{p-p} to pin 52 and measuring pin 41.

(1) Measure the voltage of pin 51.
 Set the brightness to maximum, set the subaddress (0F) data to (30), and set the subaddress (10) data to (20).
 (2) Input signal 3 ($f_0 = 100\text{ kHz}$, picture period amplitude $= 0.115\text{ V}_{p-p}$) to pin 51.
 (3) Measure the picture period amplitude of pin 43 when the color data are changed to the maximum (7 F), the center (40), and the minimum (01). (ΔvCY , $vCYMAX$, $vCYCNT$, $vCYMIN$)
 (4) Calculate the color maximum and minimum amplitude ratios for the center using decibel conversion. ($\Delta vCY+$, $\Delta vCY-$)
 (5) Repeat steps (2) to (4) above, inputting the picture period amplitude 0.1 V_{p-p} to pin 52 and measuring pin 41.

NOTE	PARAMETER	TEST CONDITIONS (UNLESS OTHERWISE STATED, $V_{CC1} = 5V$, $V_{CC2} / V_{CC3} / DEF\ V_{CC} = 9V$, $T_a = 25 \pm 3^\circ C$)						TEST CONDITIONS

```

Test conditions for D12:

Apply a 50 Hz composite video signal to TP15, then measure the phase difference VR50S1 and the pulse width VR50S2 of the pin 43 (R.out) waveform in relation to the pin 15 (sync input) waveform. Similarly, measure pins 42 and 41.

Test conditions for D13:

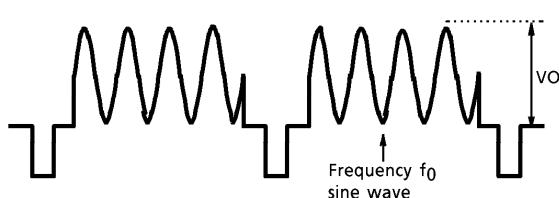

Apply the same conditions as those for D12 except change the input signal to a 60 Hz composite video signal and measure the phase difference VP60S1 and pulse width VP60S2.

Test conditions for D14:

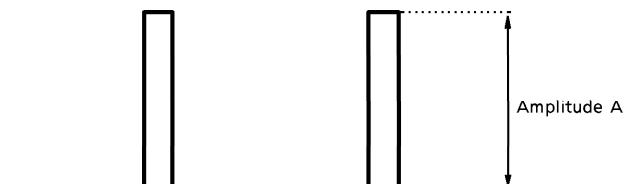

Apply a 50 Hz composit video signal to TP15, set the subaddress (17) data to (07), then measure the pulse width of the pin 17.

RESTRICTIONS ON PRODUCT USE

000707EBA

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
