

TA2041F

SOUND FIELD REPRODUCTION IC

The TA2041F is sound field reproduction IC developed for stereo audio equipment as radio cassette and music center.

This IC has made it possible to reproduce stereo phonic sound with more presence by forcing difference signals of R-ch and L-ch to delay and applying these signals to R-ch and L-ch again.

FEATURES

- Dual Channel
- 3-type surround mode and normal mode are available
- Built-in mode switch
- Built-in EXT-IN terminal
- Operating Supply Voltage Range : $V_{CC}(\text{opr.}) = 4.0 \sim 12.0\text{V}$ ($T_a = 25^\circ\text{C}$)

Weight : 0.31g (Typ.)

961001EBA1

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
