Dual, 200mA, Low-I_Q Low-Dropout Regulator for Portable Devices

FEATURES

- **Very Low Dropout:**
  - **150mV at I_{OUT} = 200mA and V_{OUT} = 2.8V**
  - **75mV at I_{OUT} = 100mA and V_{OUT} = 2.8V**
  - **40mV at I_{OUT} = 50mA and V_{OUT} = 2.8V**
- **2% Accuracy Over Temperature**
- **Low I_Q of 35μA per Regulator**
- **Multiple Fixed Output Voltage Combinations Possible from 1.2V to 4.8V**
- **High PSRR: 70dB at 1kHz**
- **Stable with Effective Capacitance of 0.1μF(1)**
- **Over-Current and Thermal Protection**
- **Dedicated V_{REF} for Each Output Minimizes Crosstalk**
- **Available in 1.5mm × 1.5mm SON-6 Package**

(1) See the *Input and Output Capacitor Requirements* in the *Application Information* section

APPLICATIONS

- **Wireless Handsets, Smart Phones, PDAs**
- **MP3 Players and Other Handheld Products**

DESCRIPTION

The TLV710 and TLV711 series of dual, low-dropout (LDO) linear regulators are low quiescent current devices with excellent line and load transient performance. These LDOs are designed for power-sensitive applications. These devices provide a typical accuracy of 2% over temperature.

The TLV711 series provides an active pulldown circuit to quickly discharge the outputs.

In addition, the TLV711-D series of devices have pull-down resistors at the EN pins. This design helps in disabling the device when the signal-driving EN pins are in a weak, indeterminate state (for example, the GPIO of a processor that might be three-stated during startup). The pull-down resistor pulls the voltage to the EN pins down to 0V, thus disabling the device.

The TLV710 and TLV711 series are available in a 1.5mm x 1.5mm SON-6 package, and are ideal for handheld applications.

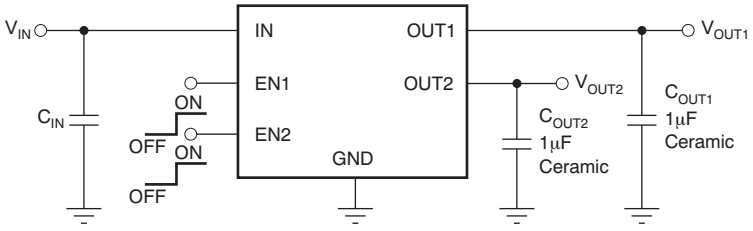
Typical Application Circuit



This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ORDERING INFORMATION(1)

PRODUCT	V_{OUT}(2)
TLV710**xxyy**qwwwz TLV711**xxyy**qwwwz	**XX** is nominal output voltage of channel 1 (for example 18 = 1.8V). **YY** is nominal output voltage of channel 2 (for example 28 = 2.8V). **Q** is optional. Use "U" for devices with EN pin pull-up resistor, and "D" for devices with EN pin pull-down resistor. **WWW** is package designator. **Z** is package quantity. Use "R" for reel (3000 pieces), and "T" for tape (250 pieces).

(1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or visit the device product folder on www.ti.com.
(2) Output voltages from 1.2V to 4.8V in 50mV increments are available through the use of innovative factory OTP programming; minimum order quantities may apply. Contact factory for details and availability.

ABSOLUTE MAXIMUM RATINGS(1)

At T_J = –40°C to +125°C (unless otherwise noted).

		VALUE		UNIT
		MIN	MAX	
Voltage(2)	IN	–0.3	+6.0	V
	EN	–0.3	V_{IN} + 0.3	V
	OUT	–0.3	+6.0	V
Current	OUT	Internally limited		A
Output short-circuit duration		Indefinite		s
Temperature	Operating junction, T_J	–55	+150	°C
	Storage, T_{stg}	–55	+150	°C
Electrostatic Discharge Rating	Human body model (HBM) QSS 009-105 (JESD22-A114A)		2	kV
	Charged device model (CDM) QSS 009-147 (JESD22-C101B.01)		500	V

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated is not implied. Exposure to absolute-maximum-rated conditions for extended periods my affect device reliability.
(2) All voltages with respect to ground.

THERMAL INFORMATION(1)

THERMAL METRIC(2)		TLV710, TLV711 DSE 6 PINS	UNITS
ψ_{JT}	Junction-to-top characterization parameter	6	°C/W

(1) See the *Power Dissipation* section for more details.
(2) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.

ELECTRICAL CHARACTERISTICS

At T_J = +25°C, V_{IN} = $V_{OUT(TYP)}$ + 0.5V or 2.0V (whichever is greater), I_{OUT} = 10mA, V_{EN1} = V_{EN2} = 0.9V, and C_{OUT1} = C_{OUT2} = 1μF, unless otherwise noted.

PARAMETER		TEST CONDITIONS		TLV710, TLV711			UNIT
				MIN	TYP	MAX	
V_{IN}	Input voltage range			2.0		5.5	V
V_O	Output voltage range			1.2		4.8	V
V_{OUT}	DC output accuracy	–40°C ≤ T_J ≤ +125°C		–2		+2	%
$\Delta V_O/\Delta V_{IN}$	Line regulation	$V_{OUT(NOM)}$ + 0.5V ≤ V_{IN} ≤ 5.5V			1	5	mV
$\Delta V_O/\Delta I_{OUT}$	Load regulation	0mA ≤ I_{OUT} ≤ 200mA			5	15	mV
V_{DO}	Dropout voltage	V_{IN} = 0.98V × $V_{OUT(NOM)}$, I_{OUT} = 200mA, 2V ≤ V_{OUT} < 2.4V			200	285	mV
		V_{IN} = 0.98V × $V_{OUT(NOM)}$, I_{OUT} = 200mA, 2.4V ≤ V_{OUT} < 2.8V			175	250	mV
		V_{IN} = 0.98V × $V_{OUT(NOM)}$, I_{OUT} = 200mA, 2.8V ≤ V_{OUT} < 3.3V			150	215	mV
		V_{IN} = 0.98V × $V_{OUT(NOM)}$, I_{OUT} = 200mA, 3.3V ≤ V_{OUT} ≤ 4.8V			140	200	mV
I_{CL}	Output current limit	V_{OUT} = 0.9V × $V_{OUT(NOM)}$		220	350	550	mA
I_Q	Quiescent current	V_{EN1} = high, V_{EN2} = low, I_{OUT1} = 0mA			35		μA
		V_{EN1} = low, V_{EN2} = high, I_{OUT2} = 0mA			35		μA
		V_{EN1} = high, V_{EN2} = high, I_{OUT} = 0mA			70	110	μA
I_{GND}	Ground pin current	I_{OUT1} = I_{OUT2} = 200mA			360		μA
$I_{SHUTDOWN}$	Shutdown current	$V_{EN1,2}$ ≤ 0.4V, 2.0V ≤ V_{IN} ≤ 4.5V			2.5	4	μA
PSRR	Power-supply rejection ratio	V_{OUT} = 1.8V	f = 10Hz		80		dB
			f = 100Hz		75		dB
			f = 1kHz		70		dB
			f = 10kHz		70		dB
			f = 100kHz		50		dB
V_N	Output noise voltage	BW = 100Hz to 100kHz, V_{OUT} = 1.8V			48		μV_{RMS}
t_{STR}	Startup time(1)	C_{OUT} = 1.0μF, I_{OUT} = 200mA			100		μs
V_{HI}	Enable high (enabled)			0.9		V_{IN}	V
V_{LO}	Enable low (shutdown)			0		0.4	V
I_{EN}	Enable pin current, enabled	TLV710, TLV711			0.04		μA
		TLV710-D, TLV711-D			6		μA
UVLO	Undervoltage lockout	V_{IN} rising			1.9		V
T_J	Operating junction temperature			–40		+125	°C
T_{SD}	Thermal shutdown temperature	Shutdown, temperature increasing			+165		°C
		Reset, temperature decreasing			+145		°C

(1) Startup time = time from EN assertion to 0.98 x $V_{OUT(NOM)}$.

PIN DESCRIPTIONS

NAME	PIN NO.	DESCRIPTION
EN1	1	Enable pin for regulator 1. Driving EN1 over 0.9V turns on regulator 1. Driving EN below 0.4V puts regulator 1 into shutdown mode.
IN	2	Input pin. A small capacitor is needed from this pin to ground to assure stability. See *Input and Output Capacitor Requirements* in the *Application Information* section for more details.
EN2	3	Enable pin for regulator 2. Driving EN2 over 0.9V turns on regulator 2. Driving EN2 below 0.4V puts regulator2 into shutdown mode.
GND	4	Ground pin.
OUT2	5	Regulated output voltage pin. A small 1μF ceramic capacitor is needed from this pin to ground to assure stability. See *Input and Output Capacitor Requirements* in the *Application Information* section for more details.
OUT1	6	Regulated output voltage pin. A small 1μF ceramic capacitor is needed from this pin to ground to assure stability. See *Input and Output Capacitor Requirements* in the *Application Information* section for more details.

TYPICAL CHARACTERISTICS

Over operating temperature range of T_J = –40°C to +125°C, $V_{EN1} = V_{EN2} = V_{IN}$, C_{IN} = 1µF, C_{OUT1} = 1µF, and C_{OUT2} = 1µF, unless otherwise noted. Typical values are at T_J = +25°C.

APPLICATION INFORMATION

The TLV710 and TLV711 series of devices belong to a new family of next generation, value LDO regulators. These devices consume low quiescent current and deliver excellent line and load transient performance. These features, combined with low noise, very good PSRR with little (V_{IN} to V_{OUT}) headroom, make these devices ideal for RF portable applications. This family of LDO regulators offers current limit and thermal protection, and is specified from –40°C to +125°C.

INPUT AND OUTPUT CAPACITOR REQUIREMENTS

1.0μF X5R- and X7R-type ceramic capacitors are recommended because they have minimal variation in value and equivalent series resistance (ESR) over temperature.

However, the TLV710 and TLV711 are designed to be stable with an effective capacitance of 0.1μF or larger at the output. Thus, the device would also be stable with capacitors of other dielectrics, as long as the effective capacitance under operating bias voltage and temperature is greater than 0.1μF. This effective capacitance refers to the capacitance that the device sees under operating bias voltage and temperature conditions (that is, the capacitance after taking bias voltage and temperature derating into consideration.)

In addition to allowing the use of cost-effective dielectrics, these devices also enable using smaller footprint capacitors that have a higher derating in size-constrained applications.

Note that using a 0.1μF rating capacitor at the output of the LDO regulator does not ensure stability because the effective capacitance under operating conditions would be less than 0.1μF. The maximum ESR should be less than 200mΩ.

Although an input capacitor is not required for stability, it is good analog design practice to connect a 0.1μF to 1.0μF low ESR capacitor across the IN and GND pins of the regulator. This capacitor counteracts reactive input sources and improves transient response, noise rejection, and ripple rejection. A higher-value capacitor may be necessary if large, fast-rise-time load transients are anticipated, or if the device is not located near the power source. If source impedance is more than 2Ω, a 0.1μF input capacitor may be necessary to ensure stability.

BOARD LAYOUT RECOMMENDATIONS TO IMPROVE PSRR AND NOISE PERFORMANCE

Input and output capacitors should be placed as close to the device pins as possible. To improve ac performance such as PSRR, output noise, and transient response, it is recommended that the board be designed with separate ground planes for V_{IN} and V_{OUT}, with the ground plane connected only at the GND pin of the device. In addition, the ground connection for the output capacitor should be connected directly to the GND pin of the device. High ESR capacitors may degrade PSRR.

INTERNAL CURRENT LIMIT

The TLV710 and TLV711 internal current limits help protect the regulator during fault conditions. During current limit, the output sources a fixed amount of current that is largely independent of output voltage. In such a case, the output voltage is not regulated, and is $V_{OUT} = I_{LIMIT} \times R_{LOAD}$.

The PMOS pass transistor dissipates $(V_{IN} – V_{OUT}) \times I_{LIMIT}$ until thermal shutdown is triggered and the device is turned off. As the device cools down, it is turned on by the internal thermal shutdown circuit. If the fault condition continues, the device cycles between current limit and thermal shutdown. See the *Thermal Information* section for more details. The PMOS pass element in the TLV710 and TLV711 has a built-in body diode that conducts current when the voltage at OUT exceeds the voltage at IN. This current is not limited, so if extended reverse voltage operation is anticipated, external limiting to 5% of rated output current is recommended.

SHUTDOWN

The enable pin (EN) is active high. The device is enabled when EN pin goes above 0.9V. This relatively lower value of voltage needed to turn the LDO regulator on can be used to enable the device with the GPIO of recent processors whose GPIO voltage is lower than traditional microcontrollers.

The device is turned off when the EN pin is held at less than 0.4V. When shutdown capability is not required, the EN pin can connected to the IN pin.

The TLV711 has internal pull-down circuitry that discharges output with a time constant of:

$$\tau = \frac{120 \cdot R_L}{120 + R_L} \cdot C_{OUT} \quad (1)$$

Where:

R_L = load resistance

C_{OUT} = output capacitor

DROPOUT VOLTAGE

The TLV710 and TLV711 use a PMOS pass transistor to achieve low dropout. When (V_{IN} – V_{OUT}) is less than the dropout voltage (V_{DO}), the PMOS pass device is in the linear region of operation and the input-to-output resistance is the $R_{DS(ON)}$ of the PMOS pass element. V_{DO} scales approximately with the output current because the PMOS device behaves as a resistor in dropout.

As with any linear regulator, PSRR and transient response are degraded as (V_{IN} – V_{OUT}) approaches dropout.

TRANSIENT RESPONSE

As with any regulator, increasing the size of the output capacitor reduces over/undershoot magnitude but increases duration of the transient response.

The TLV710 and TLV711 each have a dedicated V_{REF}. Consequently, crosstalk from one channel to the other as a result of transients is close to 0V.

UNDERVOLTAGE LOCKOUT (UVLO)

The TLV710 and TLV711 use an undervoltage lockout circuit to keep the output shut off until the internal circuitry is operating properly.

THERMAL INFORMATION

Thermal protection disables the output when the junction temperature rises to approximately +165°C, allowing the device to cool. When the junction temperature cools to approximately +145°C, the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the dissipation of the regulator, protecting it from damage as a result of overheating.

Any tendency to activate the thermal protection circuit indicates excessive power dissipation or an inadequate heatsink. For reliable operation, junction temperature should be limited to +125°C maximum. To estimate the margin of safety in a complete design (including heatsink), increase the ambient temperature until the thermal protection is triggered; use worst-case loads and signal conditions. For good reliability, thermal protection should trigger at least +35°C above the maximum expected ambient condition of the particular application. This configuration produces a worst-case junction temperature of +125°C at the highest expected ambient temperature and worst-case load.

The internal protection circuitry of the TLV710 and TLV711 has been designed to protect against overload conditions. It was not intended to replace proper heatsinking. Continuously running the TLV710/ TLV711 into thermal shutdown degrades device reliability.

POWER DISSIPATION

The ability to remove heat from a die is different for each package type, presenting different considerations in the printed circuit board (PCB) layout. The PCB area around the device that is free of other components moves the heat from the device to the ambient air.

Performance data for the TLV710 evaluation module (EVM) are shown in Table 1. The EVM is a 2-layer board with 2 ounces of copper per side. The dimension and layout are shown in Figure 70 and Figure 71. Using heavier copper increases the effectiveness of removing heat from the device. The addition of plated through-holes in the heat-dissipating layer also improves the heatsink effectiveness. Power dissipation depends on input voltage and load conditions.

Power dissipation (P_D) is equal to the product of the output current and the voltage drop across the output pass element, as shown in Equation 2:

$$P_D = (V_{IN} – V_{OUT}) \times I_{OUT} \quad (2)$$

PACKAGE MOUNTING

Solder pad footprint recommendations for the TLV710 and TLV711 are available from the Texas Instruments Web site at www.ti.com. The recommended land pattern for the DSE (SON-6) package is shown in Figure 72.

Table 1. TLV710 EVM Dissipation Ratings

PACKAGE	$R_{\theta JA}$	T_A < +25°C	T_A = +70°C	T_A = +85°C
DSE	170°C/W	585mW	320mW	235mW

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. This package is a QFN that does not have a thermal pad on the board. Refer to Application Note, Quad Flat–Pack Packages, Texas Instruments Literature No. SCBA017, SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <http://www.ti.com>.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
F. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

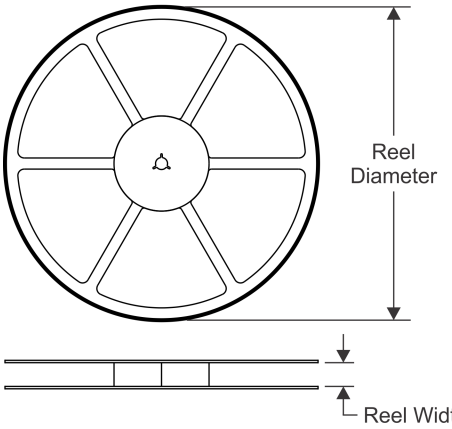
(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

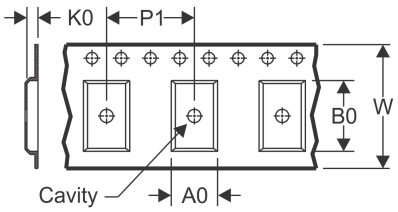
In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

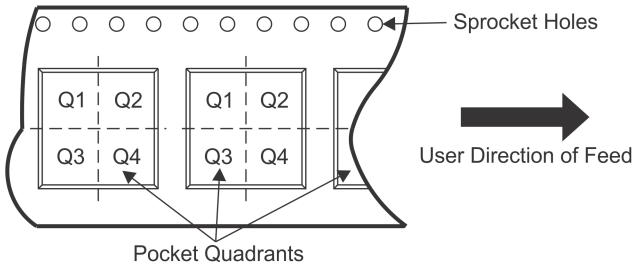


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

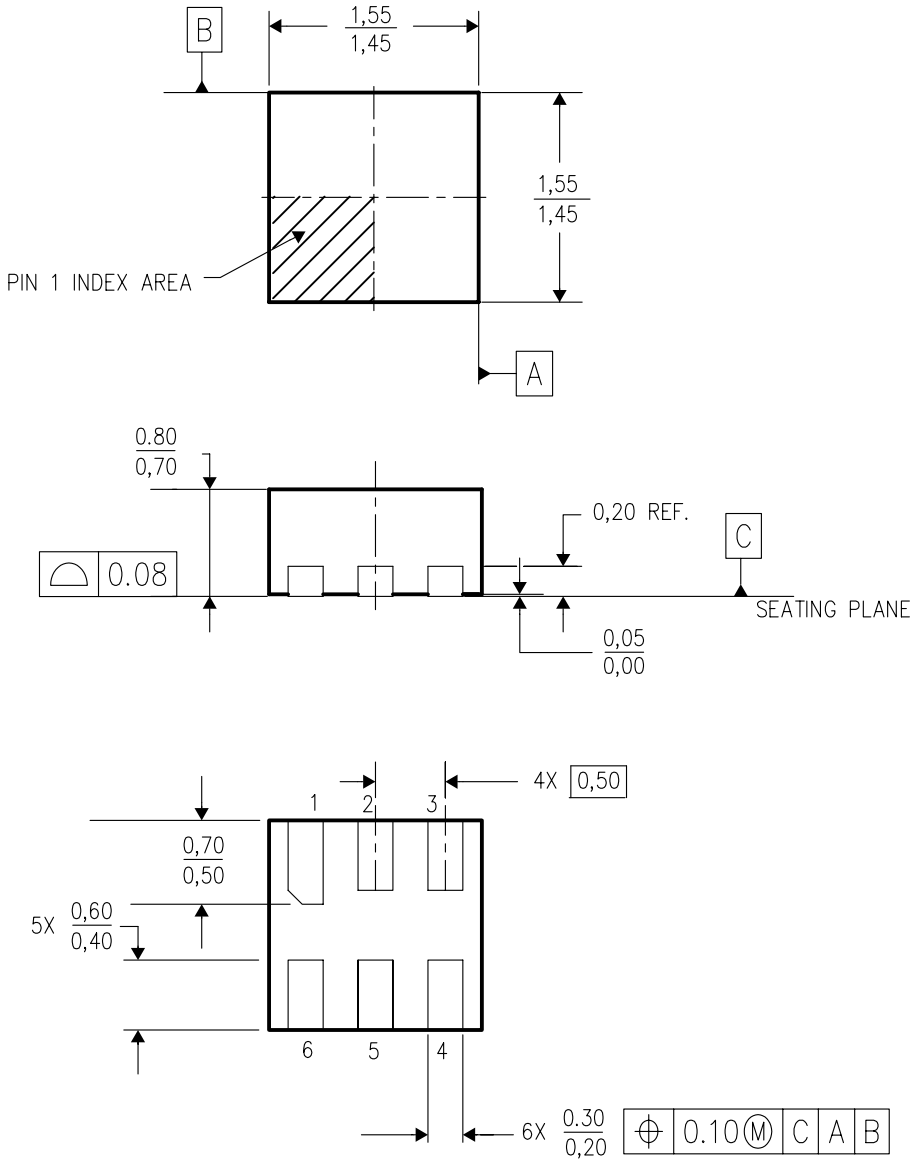
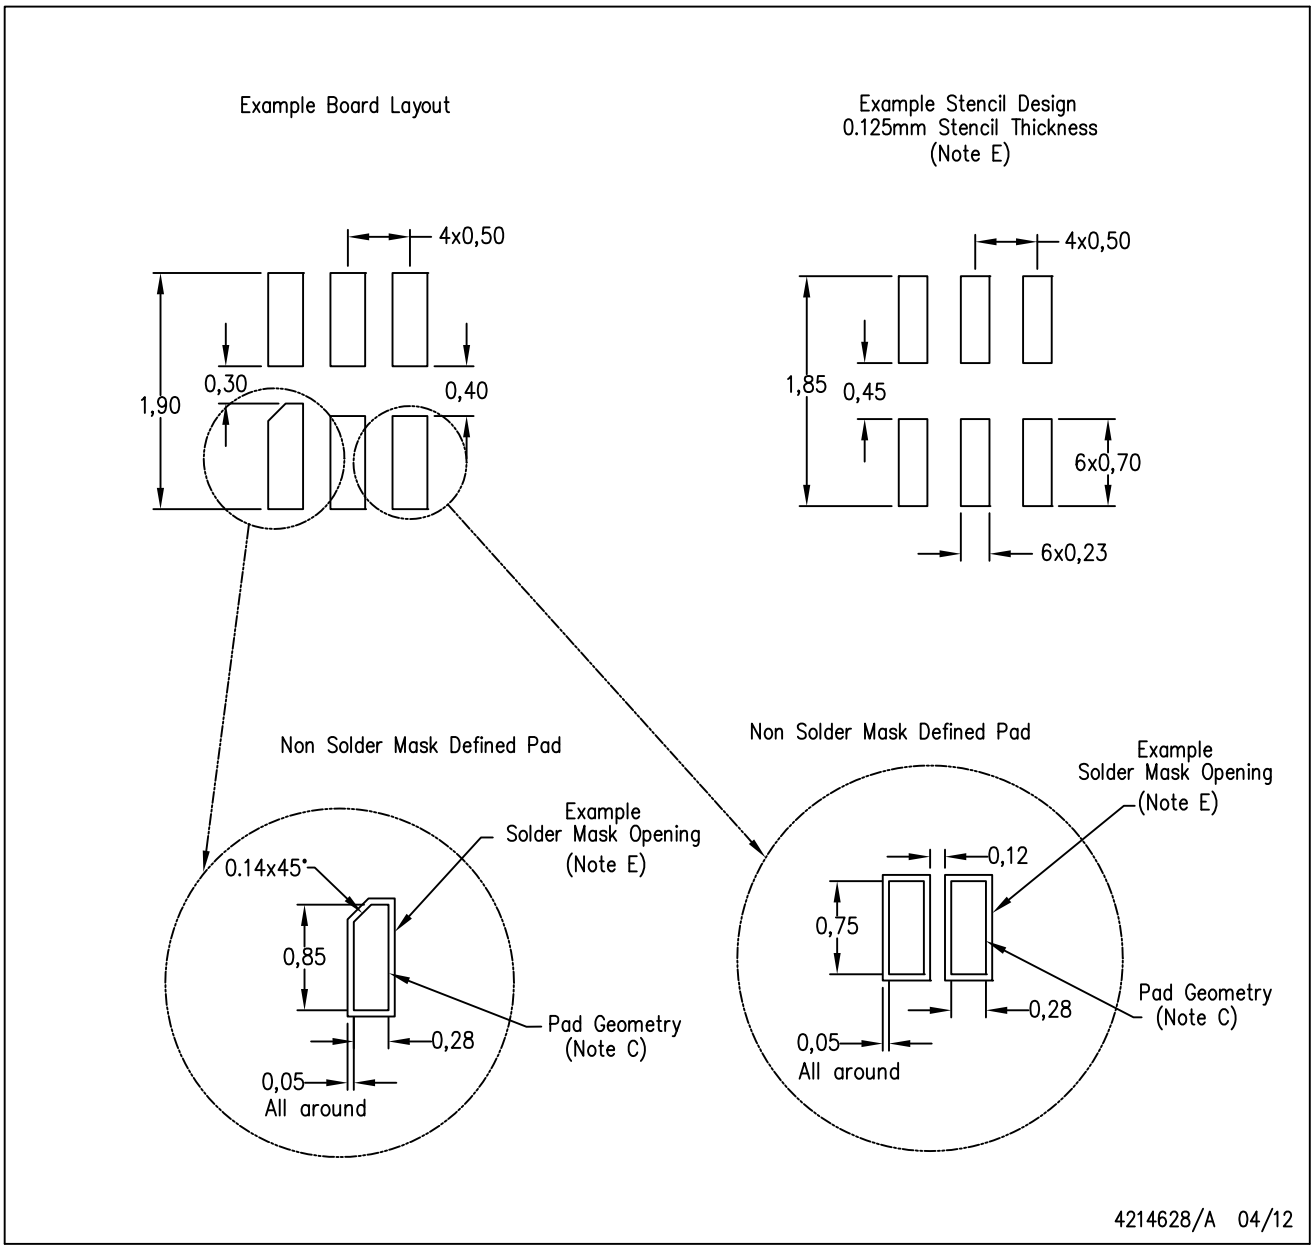
DSE (S–PDSO–N6) PLASTIC SMALL OUTLINE



4207810/A 03/06

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Small Outline No–Lead (SON) package configuration.
D. This package is lead–free.

DSE (S–PWSON–N6) PLASTIC SMALL OUTLINE NO–LEAD



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
E. Customers should contact their board fabrication site for solder mask tolerances.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
