

## Ultra-Small, Low on Resistance Load Switch with Controlled Turn-on

Check for Samples: [TPS22910](#)

### FEATURES

- Integrated Single Load Switch
- Ultra Small CSP-4 Package 0.9mm × 0.9mm, 0.5mm Pitch
- Input Voltage Range: 1.4-V to 5.5-V
- Low ON-Resistance
  - $r_{ON} = 60\text{-m}\Omega$  at  $V_{IN} = 5\text{-V}$
  - $r_{ON} = 61\text{-m}\Omega$  at  $V_{IN} = 3.3\text{-V}$
  - $r_{ON} = 74\text{-m}\Omega$  at  $V_{IN} = 1.8\text{-V}$
  - $r_{ON} = 84\text{-m}\Omega$  at  $V_{IN} = 1.5\text{-V}$
- 2-A Maximum Continuous Switch Current
- Low Threshold Control Input
- Controlled Slew-rate Options
- Under-Voltage Lock Out
- Reverse Current Protection

### APPLICATIONS

- Portable Industrial / Medical Equipment
- Portable Media Players
- Point Of Sales Terminals
- GPS Navigation Devices
- Digital Cameras
- Portable Instrumentation
- Smartphones / Wireless Handsets

### DESCRIPTION

The TPS22910 is a small, low  $r_{ON}$  load switch with controlled turn on. The device contains a P-channel MOSFET that can operate over an input voltage range of 1.4 V to 5.5 V. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals. The TPS22910 is active low enable.

The slew rate of the device is internally controlled in order to avoid inrush current. The TPS22910 family has various rise time options (see [Table 1](#)).

The TPS22910 device provides circuit breaker functionality by latching off the power-switch during reverse voltage situations. An internal reverse voltage comparator disables the power-switch when the output voltage ( $V_{OUT}$ ) is driven higher than the input ( $V_{IN}$ ) to quickly (10 $\mu$ s typ) stop the flow of current towards the input side of the switch. Reverse current protection is always active, even when the power-switch is disabled. Additionally, under-voltage lockout (UVLO) protection turns the switch off if the input voltage is too low.

The TPS22910 is available in an ultra-small, space-saving 4-pin CSP package and is characterized for operation over the free-air temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

### TYPICAL APPLICATION

**Table 1. Feature List**

| DEVICE                   | $r_{ON}$ (typ) at 3.3 V | RISE TIME at 3.3V (typ) | QUICK OUTPUT DISCHARGE <sup>(1)</sup> | MAXIMUM OUTPUT CURRENT | ENABLE     |
|--------------------------|-------------------------|-------------------------|---------------------------------------|------------------------|------------|
| TPS22910A                | 63 m $\Omega$           | 1 $\mu$ s               | No                                    | 2-A                    | Active Low |
| TPS22910B <sup>(2)</sup> | 63 m $\Omega$           | 100 $\mu$ s             | No                                    | 2-A                    | Active Low |
| TPS22910C <sup>(2)</sup> | 63 m $\Omega$           | 1000 $\mu$ s            | No                                    | 2-A                    | Active Low |
| TPS22910D <sup>(2)</sup> | 63 m $\Omega$           | 4500 $\mu$ s            | No                                    | 2-A                    | Active Low |

(1) This feature discharges the output of the switch to ground through an 150- $\Omega$  resistor, preventing the output from floating.

(2) Contact local sales/distributor or factory for availability.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## ORDERING INFORMATION

Figure 27.

## APPLICATION INFORMATION

### On/Off Control

The ON pin controls the state of the switch. Asserting ON low enables the switch. ON is active low and has a low threshold, making it capable of interfacing with low-voltage signals. The ON pin is compatible with standard GPIO logic threshold. It can be used with any microcontroller with 1.2-V, 1.8-V, 2.5-V or 3.3-V GPIO.

### Input Capacitor

To limit the voltage drop on the input supply caused by transient inrush currents, when the switch turns on into a discharged load capacitor or short-circuit, a capacitor needs to be placed between VIN and GND. A 1-μF ceramic capacitor, CIN, placed close to the pins is usually sufficient. Higher values of CIN can be used to further reduce the voltage drop.

### Output Capacitor

A CIN to CL ratio of 10 to 1 is recommended for minimizing VIN dip caused by inrush currents during startup. Devices with faster rise times may require a larger ratio to minimize VIN dip.

### Under-Voltage Lockout

Under-voltage lockout protection turns off the switch if the input voltage drops below the under-voltage lockout threshold. During under-voltage lockout (UVLO), if the voltage level at VOUT exceeds the voltage level at VIN by the Reverse Current Voltage Threshold (VRVP), the body diode will be disengaged to prevent any current flow to VIN. With the ON pin active, the input voltage rising above the under-voltage lockout threshold will cause a controlled turn-on of the switch to limit current over-shoot.

### Reverse Current Protection

In a scenario where VOUT is greater than VIN, there is potential for reverse current to flow through the pass FET or the body diode. The TPS22910 monitors VIN and VOUT voltage levels. When the reverse current voltage threshold (VRVP) is exceeded, the switch is disabled (within 10μs typ). Additionally, the body diode is disengaged so as to prevent any reverse current flow to VIN. The FET, and the output (VOUT), will resume normal operation when the reverse current scenario is no longer present.

Use the following formula to calculate the amount of reverse current for a particular application:

$$I_{RC} = \frac{0.044V}{R_{ON(VIN)}}$$

Where,

$I_{RC}$  is the amount of reverse current,

$R_{ON(VIN)}$  is the on-resistance at the VIN of the reverse current condition.

### Board Layout

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effects that parasitic trace inductances may have on normal operation. Using wide traces for VIN, VOUT, and GND helps minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance.

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
