

EHP-A09K-S5TC-S3000CADA E1K-1T8-AM

Lead (Pb) Free Product - RoHS Compliant

Features

- ◆ P-LCC-6 package.
- ◆ Small package with high efficiency.
- ◆ Colorless clear resin.
- ◆ Wide viewing angle 120°.
- ◆ Precondition: Bases on JEDEC J-STD 020D Level 2.
- ◆ Automotive reflow profile (IR reflow or wave soldering).

Applications

- ◆ Interior and exterior automotive lighting: turn light and indicating sign.
- ◆ Warning signs applied.
- ◆ Signal and symbol luminaries.
- ◆ Portable light source.
- ◆ Marker lights (e.g. steps, exit ways, etc.).
- ◆ Display for indoor and outdoor application.
- ◆ Substitution of traditional light for automotive use.
- ◆ General applications.

Moisture Resistant Packing Process

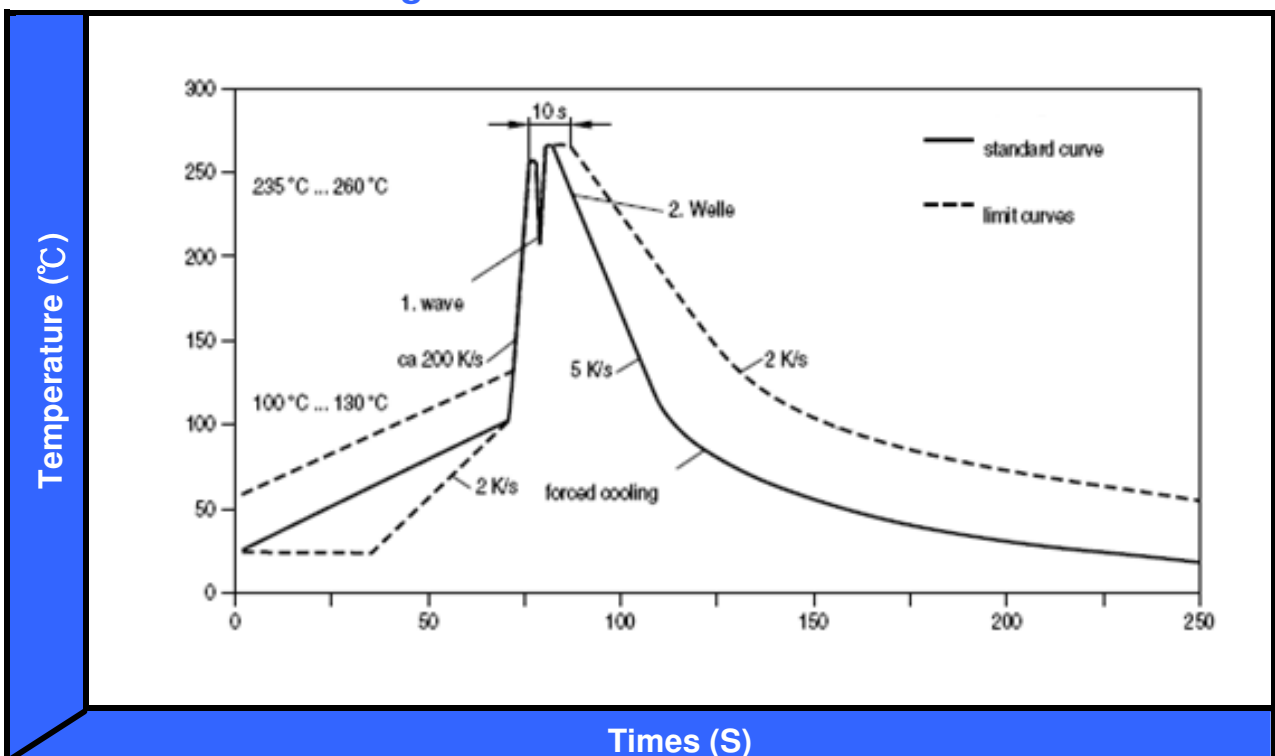

Precautions for Using

1. Soldering Condition (Reference: IPC/JEDEC J-STD-020D)

a. IR Reflow

b. Wave Soldering Reflow

2. Current Limiting

Though A09K has conducted ESD protection mechanism, customers must not use the device in reverse and should apply resistors for extra protection. Otherwise, slight voltage difference may cause enormous current shift and burn out failure would happen.

3. Storage

3.1 Moisture proof bag should only be opened immediately prior to usage.

3.2 Environment should be less than 30 °C and 60 % RH when moisture proof bag is opened.

3.3 If the moisture sensitivity card indicates higher than acceptable moisture, the component should be baked at min. 60 deg +/-5 deg for 24 hours.

4. Thermal Management

4.1 For maintaining the high flux output and achieving reliability, A09K series LEDs should be mounted on a metal core printed circuit board (MCPCB) or other kinds of heat sink with proper thermal connection to dissipate approximate 0.5 W of thermal energy at 150 mA operation.

4.2 Sufficient thermal management must be implemented. Otherwise, the junction temperature of dies might be over the limit at high current driving condition and LEDs' lifetime might be decreases dramatically.

5. Iron Soldering

Hand soldering is not recommended for regular production. These guidelines are for rework only. Soldering iron tip should contact each terminal no more than 3 sec at 350 °C, using soldering iron with nominal power less than 25 W. Allow min. 2 sec. between soldering intervals.

6. Usage

Do not exceed the values given in this specification.

Application Restrictions

High reliability applications such as military/aerospace, automotive safety/security systems, and medical equipment may require different product. If you have any concerns, please contact Everlight before using this product in your application. This specification guarantees the quality and performance of the product as an individual component. Do not use this product beyond the specification described in this document.
