### Description

The Power PLCC-4 SMT LED with Lens are high-performance PLCC-4 package size SMT LEDs targeted mainly in Automotive & Electronics Signs and Signals (ESS) markets. These top-mount single-chip packages with focused radiation offer high brightness in beam direction and are excellent for interior automotive, indoor and outdoor sign and industrial applications. With additional lens in 30° variants, these products are especially fitting to applications for traffic lights, CHMSL and displays.

The PLCC-4 package family is able to dissipate heat better compared to the PLCC-2 packages. In proportion to this increase in driving current, this family of LEDs is able to produce higher light output compared to the conventional PLCC-2 SMT LEDs.

As an extension of the standard flat top PLCC-4 SMT LEDs, the Power PLCC-4 with Lens device is able to provide focused beams within narrow viewing angles (30°) meeting the market's requirements for focused radiation and high brightness in beam directions.

The Power PLCC-4 SMT LED with 30° is ideal for panel, push button, or general backlighting in automotive interior & exterior, sign, office equipment, industrial equipment and home appliances applications. This package design coupled with careful selection of component materials allow the Power PLCC-4 SMT LED with Lens to perform with higher reliability in a larger temperature range -40°C to 100°C. This high reliability feature is crucial to allow the Power PLCC-4 SMT LED with Lens to do well in harsh environments such as its target Automotive & ESS markets. The Power PLCC4 SMT LED with Lens package is also designed to be compatible with both IR-solder re-flow and through-the-wave soldering.

2.  $\theta_{1/2}$  is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
3. Radiant intensity,  $I_e$  in watts / steradian, may be calculated from the equation  $I_e = I_v / \eta_V$ , where  $I_v$  is the luminous intensity in candelas and  $\eta_V$  is the luminous efficacy in lumens / watt.

## Moisture Sensitivity

This product is qualified as Moisture Sensitive Level 2a per Jedec J-STD-020. Precautions when handling this moisture sensitive product is important to ensure the reliability of the product. Do refer to Avago Application Note AN5305 Handling of Moisture Sensitive Surface Mount Devices for details.

### A. Storage before use

- Unopen moisture barrier bag (MBB) can be stored at <math>40^{\circ}\text{C}/90\%\text{RH}</math> for 12 months. If the actual shelf life has exceeded 12 months and the HIC indicates that baking is not required, then it is safe to reflow the LEDs per the original MSL rating.
- It is not recommended to open the MBB prior to assembly (e.g. for IQC).

### B. Control after opening the MBB

- The humidity indicator card (HIC) shall be read immediately upon opening of MBB.
- The LEDs must be kept at <math>30^{\circ}\text{C} / 60\%\text{RH}</math> at all time and all high temperature related process including soldering, curing or rework need to be completed within 672 hours.

### C. Control for unfinished reel

- For any unused LEDs, they need to be stored in sealed MBB with desiccant or desiccator at <math>5\%\text{RH}</math>.

### D. Control of assembled boards

- If the PCB soldered with the LEDs is to be subjected to other high temperature processes, the PCB need to be stored in sealed MBB with desiccant or desiccator at <math>5\%\text{RH}</math> to ensure no LEDs have exceeded their floor life of 672 hours.

### E. Baking is required if:

- "10%" is Not blue and "5%" HIC indicator turns pink.
- The LEDs are exposed to condition of <math>30^{\circ}\text{C} / 60\% \text{RH}</math> at any time.
- The LEDs floor life exceeded 672 hours.

Recommended baking condition:  $60 \pm 5^{\circ}\text{C}$  for 20 hours.
