Description / Applications:

The Lumics LU0980M330 laser diode module contains an optimized GaAs/AlGaAs/InGaAs quantum well high power laser. It has been specifically designed for applications in low noise high power Erbium Doped Fiber Amplifiers (EDFA). The extremely stringent reliability requirements are achieved through the Lumics patent innovative technology. This includes careful design, exactly defined manufacturing and extensive testing. The qualification contains a set of optoelectronic, thermal and mechanical tests. Each laser diode module is individually serialized for traceability and is shipped with a specified set of test data.

Important Notes:

- (1) Kink-free is defined as $|dL/dl| - \langle dL/dl \rangle < 0.2$, where $\langle dL/dl \rangle$ is the average slope efficiency below kink. The module is kink free (at least) up to a minimum kink-free power P_k that the module will achieve at a device-specific current, the kink-free current I_k . The individual value of I_k is noted on the hardcopy of the test report shipped with the device. All values of I_k are limited by values listed in Table 'Absolute Maximum Ratings' (see below)
- (2) Operating current (power) is the maximum current (power) where the slope efficiency does not decrease by more than 20% from average between 20mW and 110% of maximum operating power P_{op} . The maximum operating power P_{op} will be achieved at a device-specific current, the maximum operating current I_{op} . The individual value of I_{op} is noted on the hardcopy of the test report shipped with the device. All values of I_{op} are limited by the values listed in table 'Absolute Maximum Ratings'. The pump laser shall never be operated at a power higher than the maximum operating power P_{op} throughout its lifetime. At Begin of Life (BOL), the operating current shall never be higher than the device-specific maximum operating current I_{op} that is noted in the test report shipped with the device. At End of Life (EOL), the operating current shall never be higher than the device-specific kink free current I_k that is noted in the test report
- (3) λ_{p95} is defined as 95% of total spectral power
- (4) Please avoid rapid TEC on/off switching

Note:

Absolute Maximum Ratings may be applied to the laser module for short periods of time only. Exposure to maximum ratings for extended periods of time or exposure above one or more max ratings may cause damage or affect the reliability of the device.
